## Aquatic Centres & Leisure Centres

RELAX UNDER A MAKMAX SHADE STRUCTURE

Working with architects, retail developers, local governments, and community groups, MakMax Australia has created signature shade structures for a range of sports and recreation facilities such as water parks, aquatic centres and leisure centres.

Flexible design options, long life spans, and low maintenance structures made possible through tensile membranes lend themselves to public and community projects. Letting in plentiful glare-free and sun-safe natural light, adding a tensile membrane roof to an aquatic centre helps to create a world-class facility for swimmers and spectators.

A lightweight membrane roof can be built to comfortably cover an Olympic-size pool, diving tower and grandstand seating. We also have a long history of creating smaller unique and inviting custom TensoShade structures and premium quality architectural umbrellas for community spaces, such as playground shade, BBQ and picnic area cover and public pools.
