ROLLER BLIND SYSTEMS

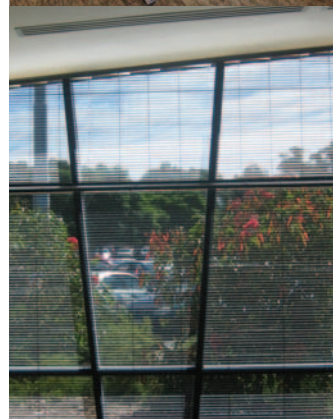

With exquisitely engineered and patented design, Vertilux Roller Blind Systems are perfectly balanced for widths of up to 3400mm for manual operation and 3100mm for single motorised. Roller Blinds offers the widest range of systems to suit most applications.

Engineered for simplicity and durability, the maintenance free systems feature Vertilux's exclusive 15 year warranty on the manual Easydrive BGS® Systems and 5 years on the motorised systems. Roller Blinds can be motorised and operated via remote control, or programmed to self-operate at pre-designated times. Alternatively, the Roller System can be chain activated. Fabrics are available in a range of plains and textures with varying opacity and many in wide widths.

TIMBER VENETIAN BLIND SYSTEMS

Timber Venetian Blinds minimise energy costs by providing excellent insulation in both summer and winter. Vertilux Timber Venetians are available in Timberline, Cedarline and Techwood. The Cedarline Blinds offer blades that are finished using UV fade resistant oil or lacquer. The Timberline Blinds offer a range of pre-finished colours and the Techwood offers a cost effective venetian solution. Vertilux Timber Venetian Systems lend themselves perfectly to motorisation for a touch of luxury and hard-to-reach applications. Motorised systems can be operated via remote control or alternatively, can be pre-programmed to self-operate at desired times of the day or night.

ALUMINIUM VENETIAN BLIND SYSTEMS

Vertilux Aluminium Venetians offer an innovative blend of classic style and state of the art engineering in 25mm and 50mm wide blades. Maintenance free components carry a 5 year quality warranty. Slats are designed to compact neatly, reducing stacking-bulk when not in use. Our Easytilt systems designed for optimum function crossing spans of up to 3330mm and users may select either standard wand operation, or the unique Vertilux Monocommand System. Vertilux Venetian Blind Systems lend themselves perfectly to cover the more difficult window shapes and with the use of motorisation for luxury and hard-to-reach applications.

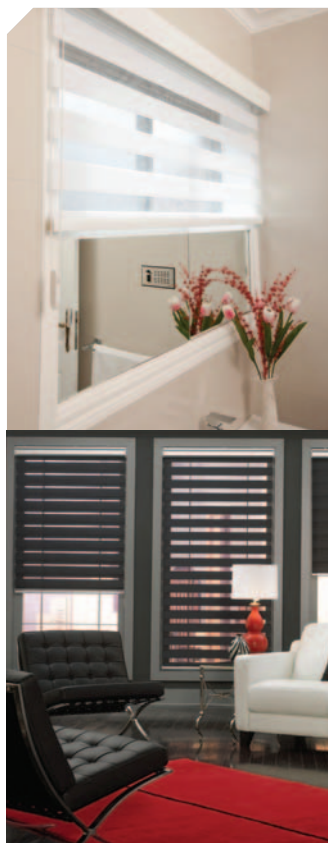

PLEATED/DUOPEAT BLIND SYSTEMS

Vertilux Pleated and Duopleat Systems are infinitely adaptable, both in screen density and shape, meeting unique design requirements including arched, circular, triangular and symmetric applications. Adaptability and the ability to motorise make these blinds particularly suited to skylights and difficult to reach placements. Like other Vertilux products the components are maintenance free and come with a five year warranty. Easy to operate and light to the touch, our Pleated/Duopleat System is engineered for optimum function over spans of up to 5800mm. Each application can be opened from either the bottom or the top so as to admit or block light whilst maintaining high levels of privacy.

SHEERVIEW BLIND SYSTEMS

The Vertilux Sheerview System combines translucence and room darkening in a single blind, making it one of the most innovative and versatile window covering systems available. Ideal for widths of up to 2740mm, the Sheerview System offers excellent insulation properties plus reduction of glare and harmful UV rays. Made from knitted polyester, they are also easy to clean. Sheerview Blinds stack neatly into colour co-ordinated head-boxes, which efficiently hide the blind when fully lifted.

SHEERLINE BLIND SYSTEMS

Sheerline® Blinds are a unique roller blind system that features a distinctive fabric made up of alternating horizontal sheer and room darkening or translucent vane. Made from 100% polyester, the SheerLine® Blind System allows you, as you would a roller blind, the ability of stopping the vanes in various positions to allow a wide range of light control into your room. Position the vanes to allow full light or roll the fabric to bring the line of translucent or room darkening vanes into line to reduce the amount of light. The SheerLine® Blind colour palette is available in a range of neutral tones to suit a wide range of decors and covers a maximum width of 2400mm.

SHEERSCREEN BLIND SYSTEMS

Sheerscreen® Blinds offer the best of both worlds, with the look of sheer curtains and the ease of vertical blinds. Adjust the solid vertical blades of Sheerscreen® to a fully opened position thus allowing the ability to see through the sheer voile fabric that is attached to the vertical blades. Or adjust to a position suitable for the desired light control until the solid blades are closed giving full privacy. Thereby, allowing for a full range of light control options. Made from 100% Polyester Voile fabric Sheerscreen® Blinds are an innovative system that combines transparency and elegance of the voile curtain fabric combined with the room darkening opacity of the vertical slats giving privacy at the turn of a wand or pull of a cord. Sheerscreen® spans to a maximum width of 5800mm.

PANEL GLIDE SYSTEMS

The Vertilux Panel Glide System is the perfect blind for larger windows and sliding doors. Available in two, three, four or five channel tracks, the Panel Glide System offers flexibility, effective light and shade control and UV protection across large expanses. Panels can be free-floating and individually adjusted. Alternatively, panels may be collected and follow a lead panel in sequence to open and close. Designed for maximum width of 5450mm with the recommended panel size range from 300mm to 1100mm.

ROMAN BLIND SYSTEMS

Combining thousands of years of tradition with the benefits of contemporary engineering, the Vertilux Roman Blind System is a timeless regulator of both light and privacy. An effective and cost efficient insulation against heat, cold and sound, Roman Blinds are light to the touch, durable and easy to operate. Designed for widths of up to 3000mm, with a wide range of fabric options. The Roman Blind System comes with a 5 year warranty.

VERTICAL BLIND SYSTEMS

Combining elegance with adaptability and energy efficiency, the Vertical Blind lends itself perfectly to a vast range of applications. Employing cutting-edge engineering, Vertical Blinds glide to the lightest touch. Designed for optimum performance over spans of up to 5800mm, vertical blinds are both hardy and ideal for unique design applications. The Vertical Blind System comes with a 5 year warranty.
