

Supaslat

MAXI BEAM

Lightweight Beam System

- Simple, bold and attractive
- Light-weight & rigid - no twisting
- Environmentally preferable

Supaslat MAXI BEAM

Lightweight Beam System

Beams that provide maximum impact while being quick and simple to specify and install!

✓ Environmentally Sustainable

SUPASLAT MAXI's honeycomb core (over 80% of the panel thickness) is 100% post consumer recycled paper waste. The MDF outer layer is low formaldehyde and are sourced from well managed forests.

✓ Light Weight

SUPASLAT MAXI weighs only around 2kg/LM for a 200mm deep beam. This relieves the support structure of undue load and obviates the need for specially engineered framing.

✓ Dimensional Stability

SUPASLAT MAXI will not warp or twist as is experienced with solid timber. The honeycomb core provides extreme rigidity and impact resistance and facilitates increased cantilevers.

✓ Acoustics

SUPASLAT MAXI is in itself acoustically diffusive, acting as a baffle. Acoustic absorption can be achieved by installing the beams under a perforated SUPACOUSTIC ceiling or SUPABAB Black acoustic backing boards. Refer to Supawood for detail drawings of backing options.

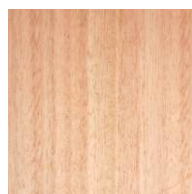

✓ Fixing Methods

SUPASLAT MAXI engineer certified fixing system includes fixing cleats and installation instructions to suit fixing to an open suspended frame, a suspended ceiling, walls or as a screen from floor to ceiling. SUPASLAT can be fixed at 1200mm centres or more, reducing framing cost substantially.

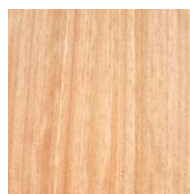

Please note: colours and specifications may be different in the UK. Please contact the UK office for more information.

Finish Options

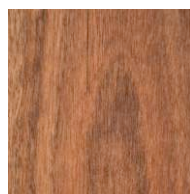

SUPA VENEER Natural Timber Finishes

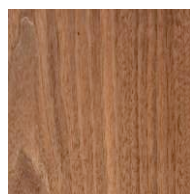

Tasmanian Oak 1/4

Blackbutt

Spotted Gum
