

project power

walling built better

afs rediwall® above & below ground

7–11 Smith Street, Ryde NSW

In building these architecturally designed, boutique apartments

Lightning Constructions were determined to both deliver on time (or earlier) without sacrificing quality. After researching their options, they identified that afs rediwall® would be pivotal in achieving both aims.

Our customer says...

Using afs rediwall®, as opposed to traditional walling methods, really demonstrated how versatile and fast this walling system is. With eight 2-bedroom apartments to a floor, we achieved 7-day turnarounds from set-outs to being core filled and readied for the form decks. This was tremendously quicker than conventional brick/blockwork.

We wish to commend Domenic Calabro, DC Concrete, for their expert installation of rediwall® on site. We also endorse Eldicio Lino, Shalom Construction, for applying a faultless render finish to the system. And obviously, we look forward to using afs rediwall® in the future. **Daniel Djogo, Foreman, Lightning Constructions**
