AMC MECANOCAUCHO® PROCESS

All machinery, which by virtue of its design has reciprocating or rotating parts, creates vibration to some degree through the imbalance of the moving parts.

This vibration produced by a machine leads to different problems such as a reduction in the machine's useful life through part wear plus the transmission of this vibration to other non-insulated adjacent structures, giving rise to problems of noise and vibration transmission. In this sense, **AMC MECANOCAUCHO®** has been developing for over 45 years different ranges of anti-vibration mounts that can solve problems like the ones described above.

Taking into account some data of the machine such as weight, mount positions, type of machine, Center of Gravity, frequency of excitation, etc., **AMC MECANOCAUCHO®** does vibration calculations in order to suggest the most appropriate anti-vibration mount solution for each case. The proposed solutions are commonly taken using following types of anti-vibration mounts: **AMC BRB**, **AMC BSB** and **AMC DRD** mounts (Rubber-Metal solution), **AMC Vibrabsorber mounts** (spring mounts solution), **Sylomer®** and **FZ+Sylomer®** mounts.

QUALITY COMMITMENT

AMC-MECANOCAUCHO® is a ISO 9001 certified company by DET NOR-SKE VERITAS DNV. AMC-MECANOCAUCHO® is officially approved by NATO under the id number NCAGE 0230B- compliant supplier.

Rubber curing properties are controlled by **Rheometrical** instruments as well as extensometers, dynamometers and durometers.

Elastical properties are measured with several axial and radial dynamometers as well as with a servohydraulic dynamic test bench from **Instron-Schenck®**.

FATIGUE AND ENDURANCE TESTS

AMC MECANOCAUCHO® has certificates of external laboratories that have tested our mounts to know the alteration of the stiffness properties during a representative life cycle of a an application.

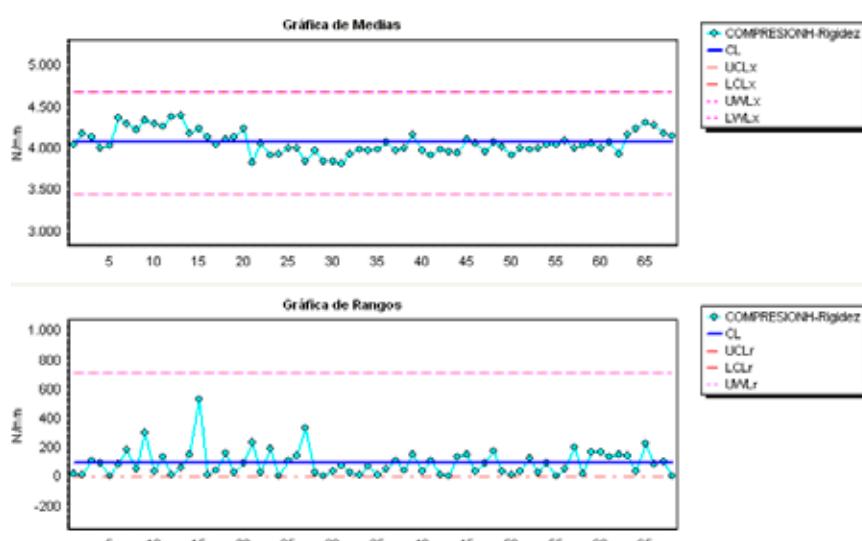

AMC MECANOCAUCHO® uses Instron Schenck® servohydraulic dynamic test benches to measure stiffness variation for mounts during a representative life cycle of an application.

PROCESS CONTROL

AMC-MECANOCAUCHO® realizes a process control of the mountings made manufactured. The % of sampling is according to customer requirement.

On the graph below, stiffness values of a mount is shown while production is taking place.

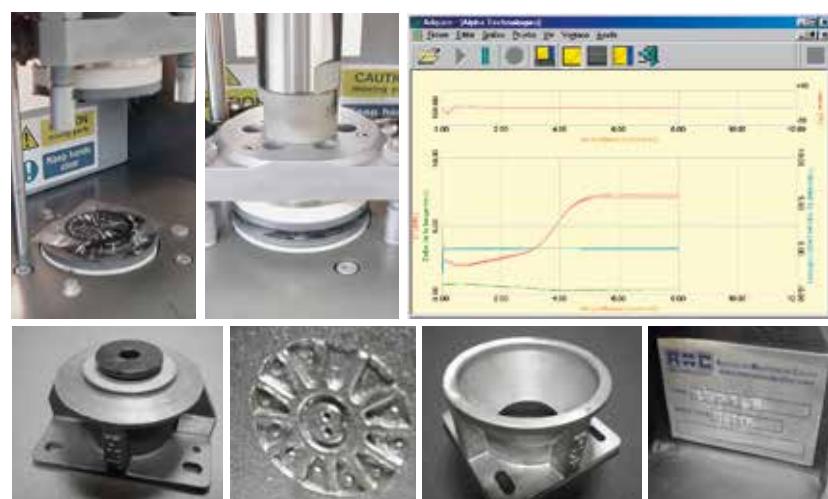

TRACEABILITY

AMC-MECANOCAUCHO® can keep track of the finished goods for those customers that require traceability on their products.

Rheometrical tests are linked to each batch of production. This allows to verify the vulcanization properties of the rubber mix used.

Foundry castings can incorporate the date of manufacturing.

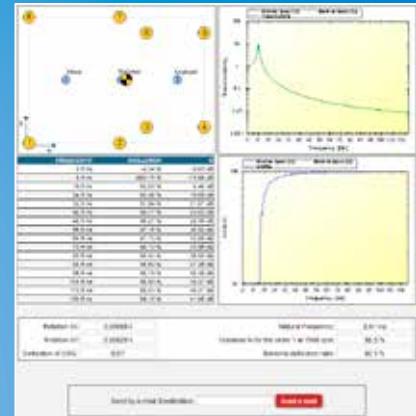

Finished goods can incorporate a **serial number**. This allows us to check stiffness values of the mounts as well as other complementary information.

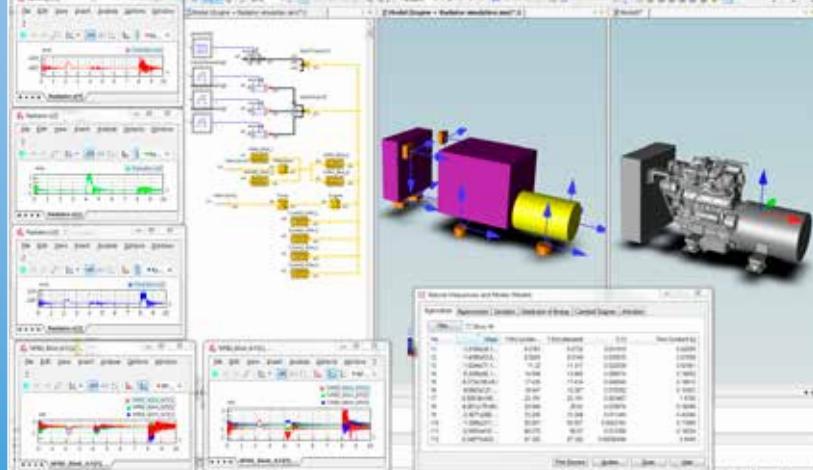

AMC MECANOCAUCHO® calculates anti-vibration solutions by taking into account data such as weight, mount positions, type of machine, center of gravity, frequency of excitation, etc...

One degree of freedom calculation

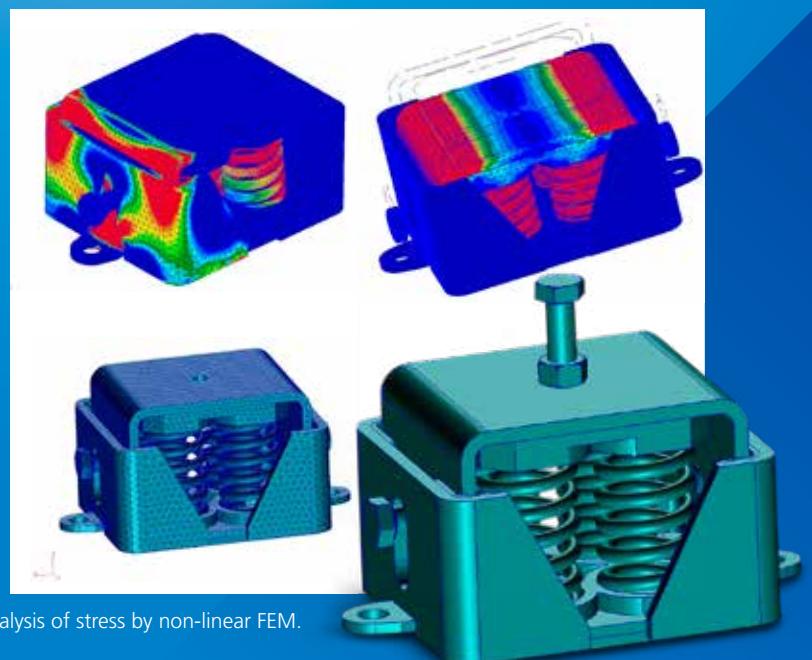

Anti-vibration calculation with more than one degree of freedom.

Anti-vibration calculation with more than one degree of freedom.

2. Design

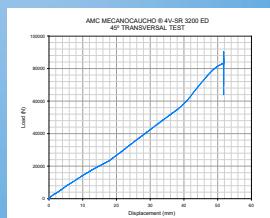

After studying client specific needs for the application and the isolation performance required, **AMC MECANOCAUCHO®** can produce a new design if standard products are not suitable.

Analysis of stress by non-linear FEM.

Modelling of products in 3D.

3. Test and dynamic characterisation

AMC MECANOCAUCHO® can offer customers a wealth of experience and know-how in measuring noise and vibration to effect optimun solutions to those problems.

4. Measurements

AMC MECANOCAUCHO® provides its customers with all its experience and know-how in measuring vibrations and noise in the field so as to reduce machine-produced emissions of noise and vibrations.

AMC MECANOCAUCHO® RANGE OF PRODUCTS FOR HVAC EQUIPMENT

These mounts work the rubber in shear and compression. Thanks to their section that produce large deflections, these BRB, BSB and DRD mounts achieve low natural frequencies and excellent vibration isolation values.

FZ sylomer®^{by getzner} MOUNTS

The AMC-MECANOCAUCHO® FZ mounts are composed by two metal parts surrounded by a high resiliency Sylomer® polyurethane compound that offers a high isolation capacity with a small static deformation in all MEDIUM-HIGH frequency range.

They have also an interlocking metal component that provides a fail-safe protection. The Sylomer® polyurethane compound is oil resistant and the temperature range of the FZ mounts is -30°C +70°C.

Natural frequency: 7-14 Hz

The main characteristic of these mounts is their own capacity to isolate very low disturbing frequencies. A wide range of loads are covered with these AMC, VSR and VSH spring mounts. Anti-seismic spring mounts are also available for seismic applications.

A Sylomer® microcellular polyurethane pad can be also included under the base plate of all the VIBRABSORBER range improving

the isolation, mainly at mid-high vibration frequencies that could be transmitted by the spring coil.

APPLICATIONS

Specially interesting for rotating machinery in buildings like air-conditioning, fans, ventilators, compressors, pumps, generators sets, etc.

ANTISEISMIC SPRING MOUNTS

These spring mounts incorporate an ANTISEISMIC device to protect the spring from earthquakes. They are also designed to provide a high reliability for the isolation of low frequency vibrations.

In addition to their resistance, these pieces offer other advantages:

- Transport safety: Vibrabsorber seismic brackets feature a locking device, so that the brackets are locked during the transport of the machinery.

- Noise isolation structure: Under these antiseismic mounts it is installed a Sylomer® microcellular polyurethane pad that insulates the mid-high frequencies that are transmitted by the spring.

LEVELLING ANTIVIBRATION MOUNTS SOLUTIONS

TSR + sylomer®

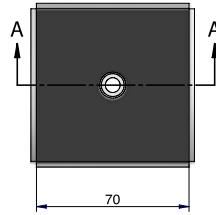

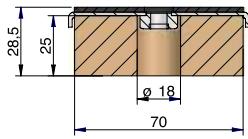

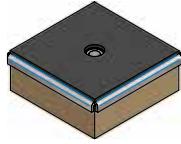

These mounts add up the good characteristic of the SYLOMER material to the typical levelling feet. They offer a high isolation capacity with a small static deformation. There are 6 different elements for a wide range of loads.

HVAC KITS FOR AIR CONDITIONING UNITS, VENTILATION BOXES AND DUCTS

NEW

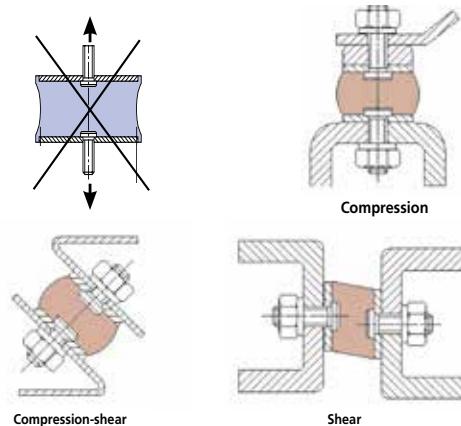

SIMPLE MOUNTS FOR AIR CONDITIONING INTERNAL COMPONENTS MECANOCAUCHO® BOBBINS

RECOMMENDATIONS FOR THE CYLINDRICAL MOUNTS

The cylindrical mounts should never work at traction. They should be used on a compression basis. To obtain greater deflection, use them at shear or shear /compression, although the maximum loads indicated in our catalogue for shear use should never be exceeded. This applies to our bobbins, diabolo, trapezoidal or annular mounts.

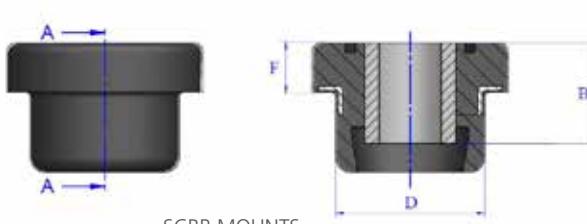

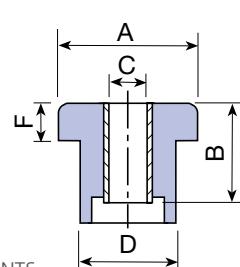

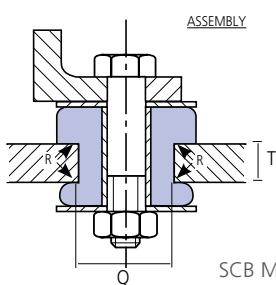

The AMC Mecanocaucho® bobbins are particularly suitable for installation on small motor-pumps, motor-ventilators, driers, sieves, compactors, washing machines, electrical motors, on-board control panels, measuring apparatuses, control cabinets, microphones, fluorescent tubes, etc.

AMC SNUBBERS FOR SEISMIC APPLICATIONS

These type of mounts are designed for use in locations subject to earthquakes or other external forces which could displace equipments. These models are intended to limit lateral and vertical machine movements.

AMC SNUBBER L + **sylomer[®]** by getzner

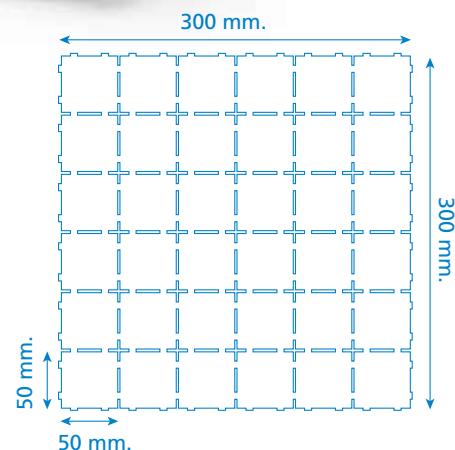

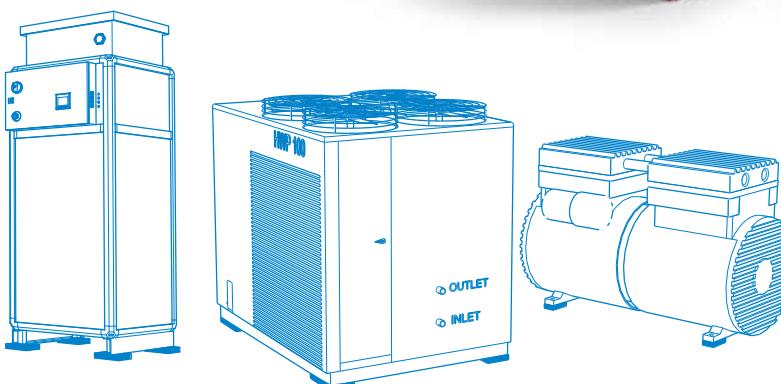

sylomer® PAD

APPLICATIONS

The pieces are made of Sylomer, which is a very effective material to avoid the transmission of the noise and vibrations thanks to its mechanical and elastic properties. The microcellular structure provides optimal isolation values with little deflection.

There are three different Sylomer densities available to ideally suit different required load ranges.

The possibility to cut easily the required pieces according to the load by support makes this product very interesting for all kind of machinery thanks to its adaptability.

Type	Max. Load kg/piece	Weight (kg.)	THICKNESS (mm.)	Nat Freq. Hz	Code
SYLOMER PAD 110	20	0,404	12	20,1	707601
		0,606	25	13,7	707602
SYLOMER PAD 220	40	0,63	12	17,4	707603
		0,97	25	11,4	707604
SYLOMER PAD 450	80	0,92	12	16,1	707605
		1,345	25	10,6	707606

FLOOR MOUNTS

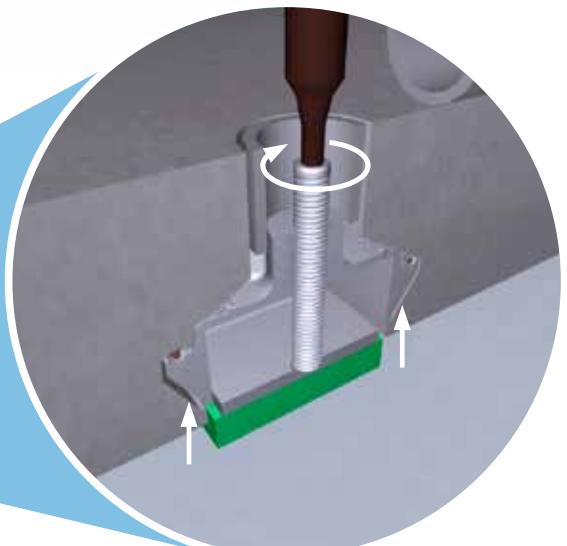

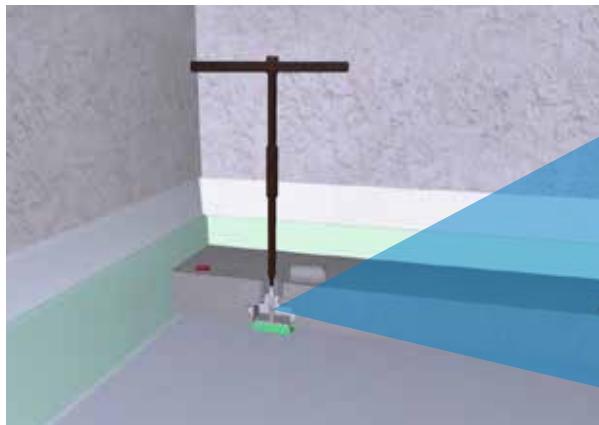

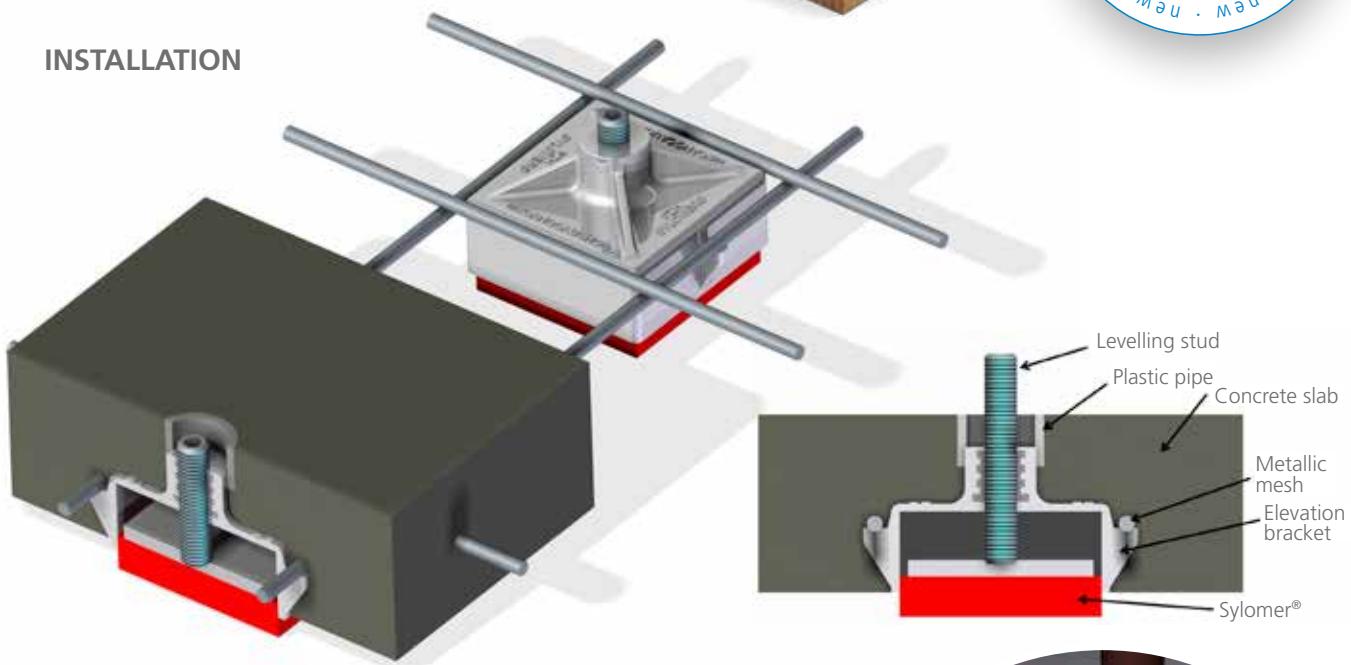

FZH + sylomer®

The goal of the system is to avoid the structure borne noise installing elastical mounts that are embedded in the concrete floating floor. The process of elevation is done once the concrete is dry. The AMC-MECANOCAUCHO® type FZH mounts incorporate a polyurethane elastomer called Sylomer®. This material offers optimal elastic and mechanical properties for the application.

The AMC-MECANOCAUCHO® type FZH mounts can be manufactured in different densities of Sylomer to match the natural frequency needed on the application. The process of leveling is simple and effective. The maximum distance between mounts is 1.2m.

ADVANTAGES

- **LOW-LEVEL**, optimum efficiency damped screeds without much height is achieved. Given that the available height is severely limited in many cases, the entire available height becomes concrete slab system and adding mass to lower the natural frequency getting.
- **High isolation** anti-vibration characteristics thanks to the Sylomer pads used in these mounts. Very low natural frequencies that provide optimum isolation are achieved.
- **Quick installation** without placing board or joints between boards.
- **Economy**, save assembly time, we do not need boards or pads.
- **Safety**, avoid the appearance of acoustic bridges, as when lifting the slab we are 100% sure that there has been no error in making the slab.
- **Easy and simple assembly**, it does not take a specialist to perform this ground.
