

Balconies

Swimming Pools

Roof Tops

Commercial Floors/Parking Decks

Waterproofing is only 80% of building costs but water leaks and subsequent damage represent approx 80% of building defects.

PROBLEM & SOLUTIONS

Crack Injection

Below Ground Tanking

Foundations

Lift Pits

Problem: Sheet Membrane Joins can de-laminate creating leaks.

Solution: Liquid Rubber

Liquid Rubber is a **SEAMLESS** membrane with superior adhesion.

Problem: Traditional Membrane hardens and cracks.

Solution: Elasticity

Liquid Rubber UV resistant, strong, flexible, elasticity of 800% (not age affected) & 95% memory.

Problem: Flames & Heat damage pipes, wiring, timber and infrastructure due to flame/heat applied waterproofing (Torch On).

Solution: Cold Spray Applied

Liquid Rubber is cold applied non-flammable liquid.

Problem: Traditional membranes take longer to install.

Multiple coats, longer curing time, substrate requires completely dry.

Solution: Instant Set

Liquid Rubber is FAST – rapid curing, one coat, substrate slightly damp. Saves **Time & Money**

Problem: Associated Fumes and VOCs.

Many membranes i.e urethanes, vinyl, epoxy based coatings high in VOCs (Volatile Organic Chemicals).

Solution: Environmentally Friendly

Liquid Rubber meets OH&S considerations: environmentally safe, non-hazardous, non-toxic, virtually odourless, non-flammable.

Problem: Poor Installation.

Unfortunately just about anyone can apply a waterproof membrane.

Solution: Liquid Rubber & F.E.W Waterproofing

Liquid Rubber is proven and trusted, used for over last 30 years in 15 countries. F.E.W Waterproofing We are so confident of our expertise and experience that F.E.W Waterproofing offer an extended warranty: 12-15 years (conditions apply).

Website: www.waterproofingfew.com.au

Email: info@waterproofingfew.com.au

Factory: 21/9 Dawson St Coburg North Vic 3058

We work only to the Master Builders standards for Internal and External Waterproofing. All products used comply with AS/NZ 4858:2004 and come with manufacturers' warranties.

Liquid Rubber

Melbourne

Environmentally Friendly Coatings

F.E.W. Waterproofing are proud to be certified Applicators and Distributor of Liquid Rubber products.

Liquid Rubber

Developed to address the recurring problems encountered by conventional asphalt based membrane systems with a solvent-free cold spray-applied liquid rubber waterproofing membrane.

- Bonds to almost any surface
- Water based emulsion blended with Elastomeric Polymers
- Highly Flexible 95% elastic Recovery
- Seamless Self Healing Insulating
- Fast Efficient Cost Effective
- Environmentally Friendly No VOCs
- UV Resistant
- Reduces Ageing & Cracking caused by Thermal & Cyclic movement

Uses of Liquid Rubber

- General Waterproofing
- Concrete foundations, pipes and forms
- Retaining walls and containment basins
- Storage and intermediate process tanks
- Roof waterproofing and restoration
- Corrosion protection of metal roofs and structures
- Waterproof liners for ponds, reservoirs, planters
- Wastewater and sewage pipe protection
- Waterproofing concrete slabs for bridge decks, parking decks, roof substrates
- Environmental protection barriers to prevent gas and liquid leakage

Liquid Rubber is a unique product with a successful track record in North America for over 20 years and has been used on an enormous variety of projects from the British Museum London to water treatment plants in Russia and encapsulating asbestos roofs in Ontario Canada.
