Sleek and durable

The DORMA AGILE 150 system combines versatility and durability to create a sophisticated and minimalist opening. The hidden rollers operate on a compact track that can be mounted on a wall or ceiling, or recessed into the ceiling for an all-glass frameless look. This truly versatile system accommodates both 10mm and 12mm glass thickness with a clamping roller and adjustable floor guide, making last minute changes possible. The special roller technology makes it easy to operate—a maximum 4% force of the door mass is needed to overcome the initial friction and set the door in motion. Specially developed track stops provide cushioned stops and a means of holding the door in the open or closed position. The system also provides superior versatility in installation and maintenance with no glass fabrication.

The Syncro version allows two panels to open and close simultaneously.

One system— many solutions

The AGILE 150 is truly versatile. The system can be wall mounted, ceiling mounted, or recess mounted in either a single door or double door configuration and with or without sidelites. It can also accommodate wood door panels.

	AGILE 150	AGILE Syncro
Max panel weight:	150 kg	80 kg
Max panel width:	1448 mm	1000 mm
Max panel height:	2743 mm	2743 mm
