

Made By 1300inflate

The XBEAM REVOLUTION has arrived
Cutting edge Airbeam technology

1300inflate has bent the proverbial technical envelope with the development of their new range of **Ezy Shelter X Beam** inflatable shelters. This remarkable *air beam* inflatable technology, has taken the industry standard portable shelter to new levels of practical, easy to use sophistication.

As the ultimate **Portable Inflatable shelter** for emergency and first response, or remote site service workshop or office, it is really unlike anything else. The self erecting inflate and seal, air beam system means that this range of inflatable shelters is incredibly stable and is so stiff that it will support a man hanging in the centre.

This unique cutting edge inflatable design is based on a geodesic dome geometry. Its stable aerodynamic shape offers an unparallel level of modular expansion. Units can adjoin to any of the 4 faces, forming a weatherproof assembly of comfortable multi use space.

Technically its built to endure the harshest situations with modern materials and assembly techniques utilized throughout. The air beam frame is made from military grade inflatable boat materials, welded together then reinforced circumferentially. This makes an air frame of unappalled rigidity. The Fire Retardant cover incorporates heavy duty double sided zips on all 4 sides to allow openings to neatly fold away to insect screened openings. The entire envelope is made flood proof by incorporating an all inclusive welded ground sheet floor.

The Ezy Shelter X Beam5 fast response inflatable **workstation** fulfills the mission critical niche to have a rapidly deployable, all weather shelter that meets the demanding need of a modern mobile response service.

Ezy Shelter XBeam5, an ideal first responders shelter for...

Disaster relief first response	Command and control rooms	Decontamination
