

Are you rapidly running out of storage space in your home?

Do you have loads of bulky items which just won't fit into your cupboards?

Storage SOLUTIONS

YOU NEED AN ACCESS LADDER:

Are you rapidly running out of storage space in your home? Do you have loads of bulky items which just won't fit into your cupboards?

With the installation of an Am-Boss access ladder, and some economically priced chipboard flooring, all easily fixed, your storage problems can be solved! Use your Am-boss access ladder time and time again, and you will because it's so easy.

Forget about those shaky stepladders. In a matter of a few hours you will have plenty of space, safe and easy access without throwing anything out. Utilise your above ceiling space!

YOU NEED THE BEST:

Guaranteed for 20* years, this beautifully manufactured, fully assembled unit comes complete with fitted architrave, draft seal, counter balancing, and a simple height adjusting mechanism to eliminate the need of cutting the ladder to length. This keeps the bottom step the same distance off the floor as the spacings from the other steps, as well as preventing the ladder being cut wrong, and helps simplify installation. Am-boss access ladders also come fitted with fixing clips so you don't have to hold the unit up there while you are installing it. As well as having an access ladder to suit your ceiling height on the shelf, Am-boss Access Ladders also make special size hatches and optional extras such as standard and full-length handrails.

EASY INSTALLATION:

Pick the right location for your access ladder system, it is not necessary to install this new unit in the same place as your existing manhole if it is in the wrong place. Easy access at the top and bottom should be considered. The unit blends seamlessly into your ceiling with no visible hinges or screws.

FROM AM-BOSS ACCESS LADDERS PTY LTD

With the installation of an Am-Boss access ladder, and some economically priced chipboard flooring, your storage problems can be solved! Use your Am-boss access ladder time and time again, and you will because it's so easy.

OTHER HANDY INFORMATION:

In September 2006 Am-boss Access Ladders released its new model, the 'Big-Boss'. Manufactured in aluminium, it has all the qualities of the 'Access-Boss' but comes with a wider hatch and ladder width. Am-boss also have heavy duty electric models available which are imported from Germany.

Am-boss Access Ladders comply with the Building Code of Australia (BCA) and have had their ladders tested and rated by Metlabs (Melbourne).

*20 year guarantee only in domestic situations with an aluminium ladder and correct installation.

SUSPENDED CEILINGS?

Am-boss pioneered installations of access ladders into suspended ceilings, and has done so for over twenty years. Am-boss developed a design using galvanized steel profiles, specially made to suit this type of application. Galvanized hangers and bracing will keep the galvanized steel support frame rigid 40mm above the suspended ceiling. The AM-BOSS pull down access ladder is then installed into the support frame; the zinc sealed steel architrave of the access ladder is strong enough and will support the ceiling around it. A fixed secondary ladder will continue from the top of the pull down access ladder to the roof hatch or plant platform. In grid ceilings Am-boss always installs the access ladder into one grid panel. Am-boss also manufacture swing down ladders suited for in door and outdoor use, and many other types of ladders.

Beautifully engineered, imported from Germany, heavy-duty "Electric" models that can be linked to smoke alarm systems for automatic opening or closing of the stair system with battery and manual over-ride. Top-opener models that can be operated manually from the floor above or below, very suitable for escape situations or if traffic on the floor is heavy you can retract the stair from above.
