

## A HIDDEN STATEMENT FOR THE BATHROOM

Geberit Pacific: Unit 8a, 6-8 Byfield Street, Macquarie Park NSW 2113 T: (02) 9889 7866 F: (02) 9889 7855 E: sales.au@geberit.com www.geberit.com.au

## **Sigma Pneumatic**

Flexible enough to fit anywhere.

 If you are renovating or building from scratch, Geberit's Sigma Pneumatic cistern can give you more space in your bathroom.

Hidden neatly in the wall behind or even "in the ceiling," this system is flexible. A one piece blow moulded, high density polyethylene tank with a 10 year warranty and a 25 year spare parts availability gives you the piece of mind you need.

The new Sigma Pneumatic button with its light activation makes flushing easier than ever before, and it can be located anywhere up to 3m from the toilet.

This technology is quiet and reliable and being in the wall or in the ceiling it is quieter when operated. A blessing in the middle of the night!

Note: The Sigma Pneumatic button range suit only Sigma75 Pneumatic cisterns with 6mm hose (109.754.00.1 and 109.755.00.1).

**One solution fits all.** Designed to accommodate even the most challenging bathroom layout, the Sigma Pneumatic cistern fits almost anywhere, even in the ceiling! The pneumatic button is so flexible it can be placed up to 3 meters from the cistern.

**Know-how** from Switzerland

## GEBERIT

Geberit's new Sigma Pneumatic buttons have a contemporary minimalist style with the flexibility to locate the buttons where you want them.

This is your personal space and you have the freedom to choose where you have the buttons mounted. Either behind the toilet, in a vanity or even in a side wall, your bathroom design can be as innovative as you want it to be. As the cistern is not locked into being directly behind the pan, it can be to the side or even in the ceiling!

The pneumatic flush buttons are light and easy to operate and the plates have four colour options.
