

There is nothing quite like a solid oak floor. Except, of course, for Big River engineered oak flooring. A thick veneer of genuine oak (4mm deep) is glued to a 7-ply structure, providing a stable board that, when laid, is indistinguishable from solid flooring.

With its unique texture and grain, oak has a natural elegance that has made it one of the most popular flooring products in the world. The subtle variations in tone add interest, while the colours remain neutral, blending well with any décor. Oak flooring can add warmth and style to a room without dominating it.

Big River engineered oak flooring is available with a Raw finish (uncoated for staining or finishing on site) or pre-finished with a Natural UV lacquer, or stained and lacquered in Frosted, Ebony and Scorched finishes.

Big River Engineered Oak flooring

Durable and Resilient

Oak has a fine grain that makes it tough enough to resist foot traffic, making it ideal for commercial applications. Our pre-finished boards utilise a water based coating that is highly scratch resistant and hard wearing.

Easy to maintain

Oak hardwood flooring requires little maintenance. Regular sweeping or vacuuming to remove dust and grit, plus wiping with a wet cloth that has been wrung dry is all that is required, as well as occasional maintenance with Big River recommended floor care products.

Specifications

- >> 1860 x 189 x 15mm
- >> 7-layer Plywood (Mixed Hardwood)
- >> Tongue & Groove
- >> 4mm Oak (ABC Grade) Veneer
