SAMPLES

SAMPLING MADE SIMPLE

Our second-to-none sample service is designed to help you find your perfect floor or wall covering for your project. Order your free samples online at www.havwoods.com.au or call 1300 428 966 and we can assist you in selecting products suitable for your project's environment.

For more information, simply call us on 1300 428 966.

WHY HAVWOODS?

It's our job to help you to achieve your desired project outcome. Over 40 years experience in wood flooring has taught us what works well in every environment. To ensure that we can give you the best possible advice for your application we focus on five dedicated sectors: retail, hospitality, offices, apartments, and residential. Our teams have extensive product knowledge across these sectors, ensuring that they really can provide you with the very best possible service and products that not only achieve the aesthetics you are after, but are also truly fit-for-purpose.

OUR CORE VALUES

Havwoods' core values define the principles, beliefs, and behaviours expected of each and every Havwoods team member on a daily basis. Our exceptional culture is shaped by our values and they provide us with a solid map with which to make decisions that support the daily achievement of our mission.

High-Performance Results Driven

- We get excited by positive results
- We strive for positive growth in all areas
- We rise to the occasion and never settle for near enough is good enough

Best Quality Always

- We go beyond the call of duty positive relationships
- We put our focus on doing the right things well
- We stay the best by embracing change, continuously improving and innovating

Inherent Integrity

- Honest & trustworthy, work vigorously to earn and keep trust
- Respect every person we interact with – customer, competitor and colleague
- Strive to ensure expectations are managed through articulate, accurate & timely communication

Cohesive Collaboration

- We create and foster positive relationships
- We encourage, motivate and hold each other accountable
- We have fun and celebrate success

Havwoods Heart & Soul

- We love what we do and are proud of who we are
- We love our customers and our colleagues
- We are passionate about our customers aspirations

HOSPITALITY

A selection of tough, fashion-forward products are vital in this sector which services bars, restaurants and hotels with wood for walls, ceilings, joinery and floors.

RETAIL

Retail clients range from individual department stores to multiple chains and franchises. We stock a wide array of products that meet the high-demands needed by the retail industry.

OFFICES

The ease and stability offered by pre-finished engineered products, coupled with tough, easy to clean modern finishes has made wood an increasingly popular choice in offices.

APARTMENTS

Services any development over 10 dwellings. At Havwoods we understand that, in addition to practicality, durability and cost-effectiveness, the large volumes often required for multi-storey apartments, also make stock-holding and logistics key factors.

RESIDENTIAL

This sector services flooring contractors and smaller builders and developers. We have a wealth of knowledge about a wide range of applications and environments suitable for the residential market including product suitability for use over underfloor heating, stairs, and custom joinery applications.

MEET THE SPECIALISTS

Our Havwoods team are passionate and full of product and industry knowledge. With backgrounds in colour consultation, joinery and more, we are ready to go beyond the call of duty to ensure you receive excellence in both product and service.

Brendan Hickson
Sales Director

Favourite product:

HW3606 Fendi Venture Plank (P87)

I love the natural character and beauty of the UV oiled finish, combined with the smokey grey variations.

Suzie Ninevski
Business Development Manager

Favourite product:

BPF21/1640/180 Oak Grove (P93)

Each plank has character, earthy raw textures and colours that will create a mesmerising talking point in any room.

Brent Calow
Client Development Manager - Strategic

Favourite product:

HW2214 Clermont Pureplank (P77)

This timber flooring exhibits all that Havwoods stands for. Clean pure hues show European Oak in its true form.

Ken Johnston
Client Executive

Favourite product:

HW2130 Allevard Pureplank (P76)

A clean but natural look. It works well in contemporary and coastal colour schemes and has a hardwearing UV lacquer.

Doug Paynter
Hospitality/Retail Relationship Manager

Favourite product:

RECM2025 Reclaimed Barn Oak (P69)

Love this product for the authenticity & natural feel it brings to a project. Textured & tactile finish that stands the test of time!

Tina Panteli
Showroom Manager - Melbourne

Favourite product:

HW963 Arena Venture Plank (P86)

I find the chocolatey colour to be very soothing; it's a natural, versatile colour and can provide warmth to your space.

Helen Theofanous
Client Executive

Favourite product:

HW634 Oak Chocolate Europlank (P105)

Just like the desert, it is luxurious, enjoyable, rich and comforting – this sweet will never expire!

Charlotte Kuch
Client Executive

Favourite product:

HW3960 Merchant Venture Plank (P88)

It's a wider select board than usual and I love the modern, contemporary and sleek look this creates in a space. A must have!

Brian Whitney
Business Development Manager

Favourite product:

RECM2025 Reclaimed Barn Oak (P69)

The unique qualities and textures of genuine Reclaimed Oak would be an exciting addition to your space.

Hayden Light
Client Executive

Favourite product:

HW961 Amendo Venture Plank (P86)

Amendo is a beautiful blend of class and style, suitable for application in any sector.

Daniella Candido
Showroom Manager - Sydney

Favourite product:

HW3606 Fendi Venture Plank (P87)

A real natural timber look and smokiness with lots of variation and character, the colour is really neutral so it suits any scheme!

Preanka Hasan
Business Development Manager

Favourite product:

RECM2200 Reclaimed Painted Pine (P64)

I love the painted finish on the reclaimed organic pine chevron, giving the product character and charm.

TALKING POINTS

CONTENTS	PAGE
Material Trends in 2018	20
Herringbone; A Short History	22

The Talking Points section of our Wood Book is devoted to delivering industry news and updates, including content curated from our trusted partners and colleagues.

MATERIAL TRENDS IN 2018

Construction material predictions typically utilise factors such as potential for industry growth, economic impact, and surprising new discoveries to showcase the best innovations for the upcoming year. For our 2018 forecast of material trends, Havwoods has selected technologies that address a combination of these criteria and offer unanticipated yet advantageous capabilities within established industries like cement, timber, and renewable energy. Assuming a successful path to commercial adoption, these offerings are looking to shake up the fields of design and construction this year and beyond.

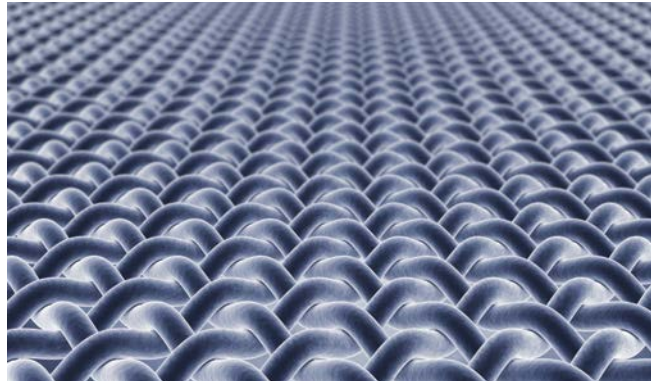

Programmable Cement

As humanity's most consumed substance after water, concrete remains a key focus of research and development. A recent study has determined that the cement in concrete carbonises carbon dioxide over time, effectively redefining the material's environmental footprint. Such studies demonstrate the need to better understand - and shape - the substance at a molecular level.

A recent example has emerged within the Multiscale Materials Laboratory at Rice University. Scientists there have discovered previously unknown principles of calcium-silicate-hydrate (C-S-H) cement particle behaviour, and are employing this knowledge to program the particles in controlled ways - they are calling it 'programmable cement'.

This study has been the first step in controlling the kinetics of cement to form desired shapes. By controlling the morphology and size of the basic building blocks of the cement, they can now self-assemble into microstructures, with far greater packing density compared to conventional cement properties.

The team anticipates this enhanced density will result in increased material strength and longevity, as well as leading to better chemical resistance and protection of reinforcing steel inside the concrete.

Power-generating fabrics

An emerging area of renewable energy integration is in the textiles sector. Power-harvesting textiles has long been a goal of designers and manufacturers of technology-enhanced apparel. However, the limited material characteristics of traditionally manufactured electronics (rigid components, wires, and fragile connections) have made them difficult to integrate within softer textiles.

Within the last twelve months, scientists at the Georgia Institute of Technology have announced the development of a fabric that harvests energy from solar and kinetic sources. The product works by embracing, rather than avoiding, friction that can result from mixing energy-generating materials with other fibres.

They employed a commercial textile machine to construct an

entirely new fabric composed of polymer-based solar cells and micro-electric fibres; strands that become electrically charged when they generate frictional contact against another material.

The engineered fabric is highly flexible, breathable, lightweight and adaptable to a range of uses. Additionally, the textile consists of low-cost, widely available, and environmentally friendly materials that can withstand high levels of stress - a rare combination of beneficial qualities that could soon bring more practical power-generating apparel to life.

Building-integrated biomass

While buildings aren't typically used to grow living organisms, building-integrated algae harvesting is becoming a thriving, if still highly experimental, trend. Since photosynthesizing organisms form the basis of most aquatic food chains, microalgae are increasingly viewed as a resource with boundless potential for addressing food and energy scarcity.

One of these biomorphic concepts consist of encapsulated algae cultures, plants and electronic sensors built into an overhead canopy that will adapt and respond to fluctuations in weather, sunlight levels, carbon dioxide exposure, air moisture

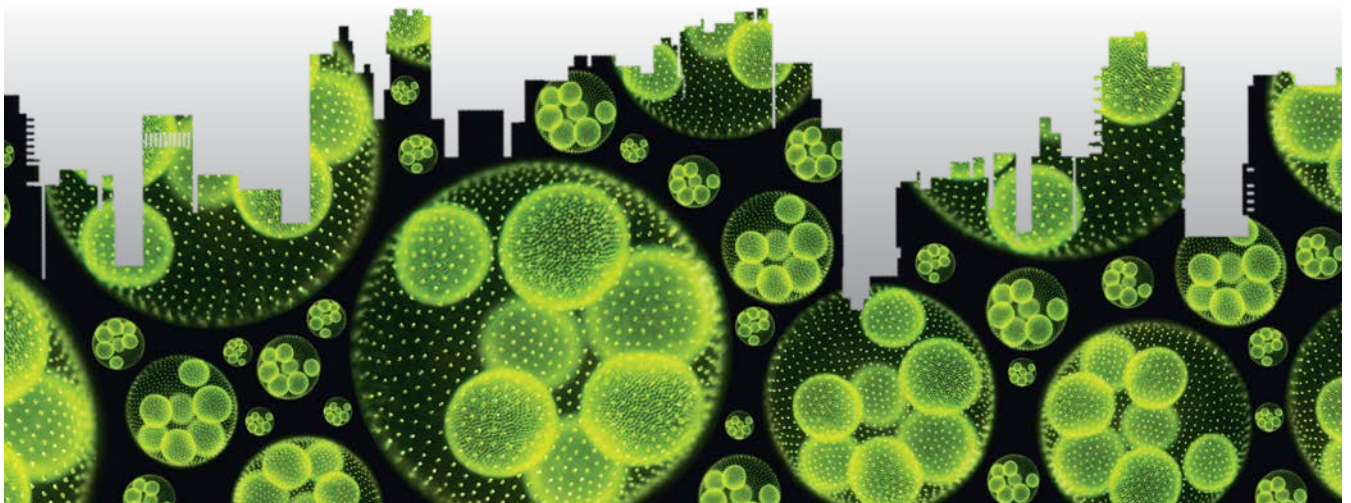

content, and even human visitor traffic. As the canopy responds to these fluctuations and photosynthesizes with the seasons, visitors are able to enjoy welcome shade and a readily available increase in oxygen.

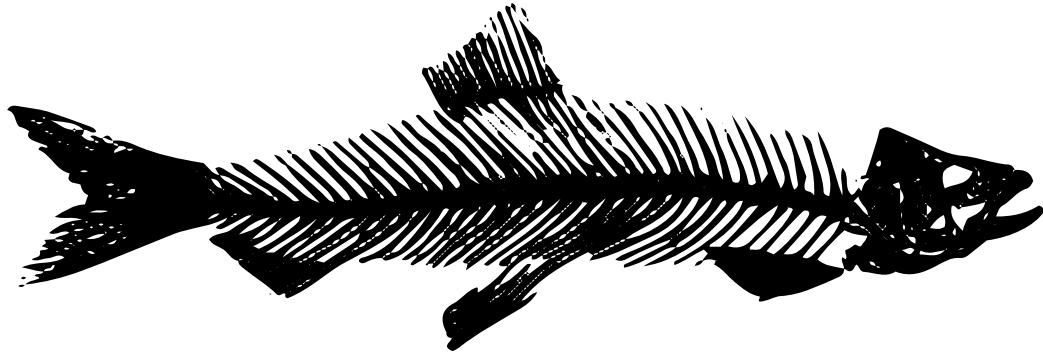

Another design features algae-based biomass built into oxygenated panel-glass facades that can generate heat and power independently, and act as a responsive light and sound barrier. Bright sunlight causes these bio-reactors to grow faster and supply greater shade on demand, as well as capturing solar heat to be harvested and re-distributed throughout a building.

Although speculative in nature, efforts to incorporate biomass cultivation into inhabitable structures represent an admirable goal for architecture that not only protects occupants via shade and increasing building oxygen supply, but can also be expanded to produce new sources of food or energy.

In the rising digital age, human, technological, and environmental forces are becoming increasingly enmeshed and co-evolutionary.

It seems that architecture is no exception.

HERRINGBONE; A SHORT HISTORY

The Roman Empire (*Opus spicatum*), used the herringbone pattern in road paving systems, and in the textiles and jewelry of ancient Egyptian elite.

The herringbone pattern is an arrangement of rectangles used for floor tilings and road pavement, so named for a fancied resemblance to the fish bones of the Herring.

The blocks can be rectangles or parallelograms. The block edge length ratios are usually 2:1, and sometimes 3:1, but need not be even ratios. The herringbone pattern has a symmetry of wallpaper group, as long as the blocks are not of different colour.

Herringbone patterns can be found in wallpaper, mosaics, cloth and clothing (herringbone cloth), shoe tread, security printing, herringbone gears, jewellery and sculpture.

In parquetry, more commonly known as flooring, herringbone patterns can be created using materials such as wood, tile, and brick. Indirect alternating colours can be used to create a idiosyncratic floor pattern, or the materials used may be the same, causing the floor to look homogeneous from a distance. Laying a herringbone floor can be very challenging, since the multitude of small rows must be made to line up evenly, which can be difficult in a room which is not perfectly perpendicular. Small mistakes in a herringbone floor can be rather noticeable because of the way the pattern lines up.

Masonry also employs herringbone, often as an accent pattern on the sides of buildings and other construction formats. A floor or outdoor walkway made from stone or brick may be made entirely from herringbone, or herringbone stripes may be integrated into other patterns. Just like with flooring, the rows must be carefully aligned to maintain the integrity of the pattern.

WOOD CHARACTERISTICS

CONTENTS	PAGE
Benefits of Wood	26
Below the Floor	28
Mastering the Art of Staircases	32
Sustainability	34
Grading and Techniques	36

Using more wood is good for your buildings and your planet – every cubic metre of wood used as a substitute for other building materials reduces CO₂ emissions by, on average, 1.1 tonnes. You can also find out all you need to know about the processes used in production and our grading criteria.

HAPPY WOOD, HAPPY LIFE; PSYCHOLOGICAL & PHYSIOLOGICAL BENEFITS OF LIVING WITH WOOD

Exposure to wood products and interiors could create similar health benefits to those created by spending time in nature, a report commissioned by Planet Ark has found.

The 'Wood - Housing, Health, Humanity' report explored numerous studies analysing the health and well-being benefits of wooden interiors in homes, businesses, and places of learning and healing.

"An increasing body of research is beginning to show that being surrounded by wood at home, work or school has positive effects on the body, the brain and the environment and can even shorten hospital stays through reduced recovery times," said Chris Philpot, Make it Wood Campaign Manager at Planet Ark. These trends are particularly important as increasing urbanisation means people have less access to nature in their daily lives - on average Australians spend over 90 per cent of their time indoors.

"The studies examining the effects of wooden rooms and furnishings clearly demonstrate that the presence of wood has positive physiological and psychological benefits that mimic the effect of spending time outside in nature," Planet Ark said.

"The feelings of natural warmth and comfort that wood elicits in people has the effect of lowering blood pressure and heart rates, reducing stress and anxiety and increasing positive social interactions. Wood products within a room have also been shown to improve indoor air quality by moderating humidity.

"These benefits are particularly important for environments where it is difficult to incorporate nature indoors, such as hospitals where strict health guidelines may prevent the presence of plants, and office environments where views from the window are of roads and neighbouring concrete buildings."

Already more architects designing buildings for healing, learning and relaxation are incorporating significant amounts of wood into their structures. This is supported by the results of an independent survey carried out by

Planet Ark, which revealed that 96 per cent of Australian not only agreed that wood is visually appealing, but also appear to be innately drawn towards the material.

The test showed survey participants images of two rooms, one furnished with a wooden chair, desk, blinds and other items made from wood, while the other showed the same items made from plastic. Two out of every three people said they preferred the wooden room, despite being unaware of timber's associated health benefits.

In addition to its health impacts, the use of responsibly sourced, certified wood leads to positive environmental outcomes and helps reduce climate change. However, only six out of ten survey participants understood that wood stores carbon and creates less carbon emissions during production than steel and concrete.

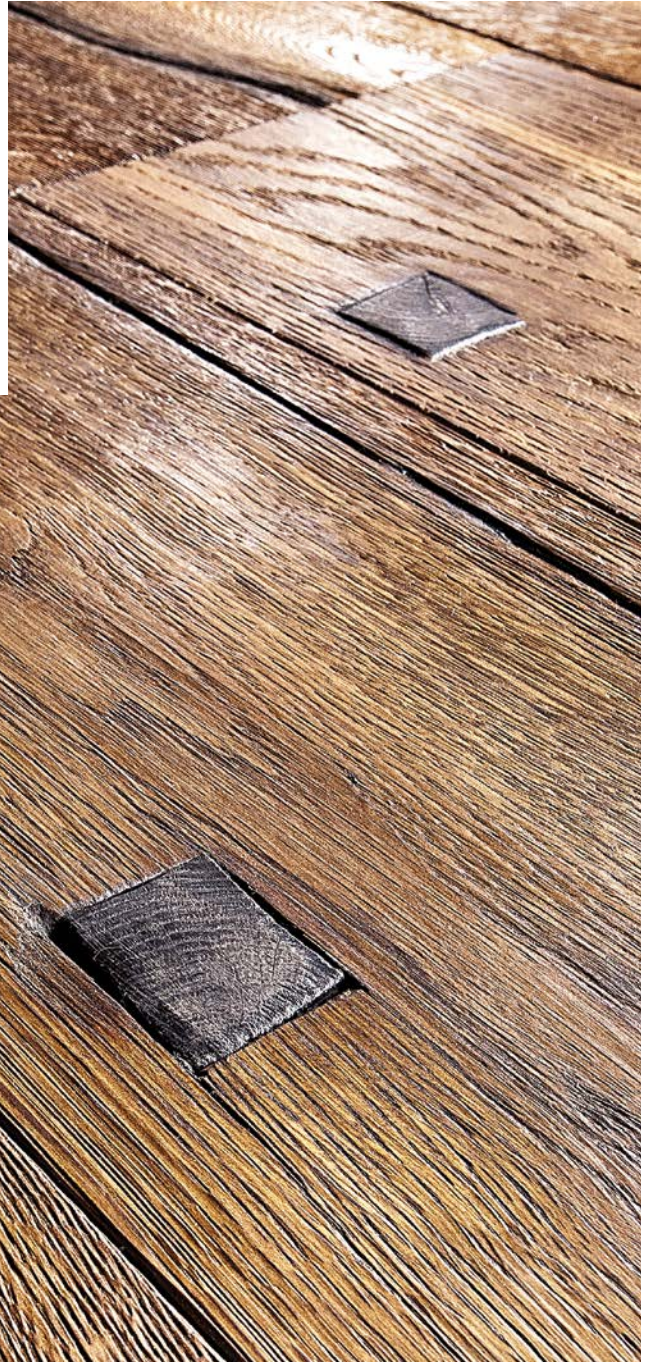

ARTICLE REPRINTED WITH PERMISSION OF WWW.ARCHITECTUREANDDESIGN.COM.AU.

TOP 6 REASONS TO HAVE WOOD AS A HOUSEMATE

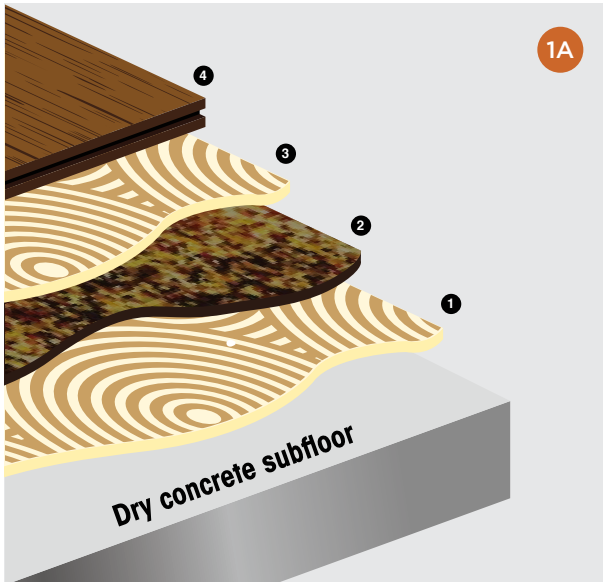

- Improves air quality by moderating humidity
- Improves emotional state and self-expression
- Certification ensures timber comes from sustainable sources
- Long term storage of carbon, helping to fight climate change
- Elicits feelings of warmth & comfort
- Lowers blood pressure, heart rate and stress levels

BELOW THE FLOOR; UNDERSTANDING WHAT LIES BENEATH

Modern subfloors can be constructed in a wide range of materials, from concrete and plywood to timber and chipboard. Each presents its own challenges when it comes to securing the selected flooring, but you can rest assured that each has a simple and effective solution with Havwoods and our Marldon range of accessories (P123). We have produced a simple guide to outline suggested solutions.

REGM3070 FURROW REPRODUCTION (P68)

1A

SOUND REDUCTION - CONCRETE

FITTING A TIMBER FLOOR OVER STRATA SOUND REDUCING UNDERLAY OVER A CONCRETE SUBFLOOR (EXAMPLE 1A)

1. MXA200 ADHESIVE

This should be trowelled out using the Marldon 3.2mm notched trowel with a coverage of approx. 1KG/sq metre.

2. STRATA UNDERLAYMENT

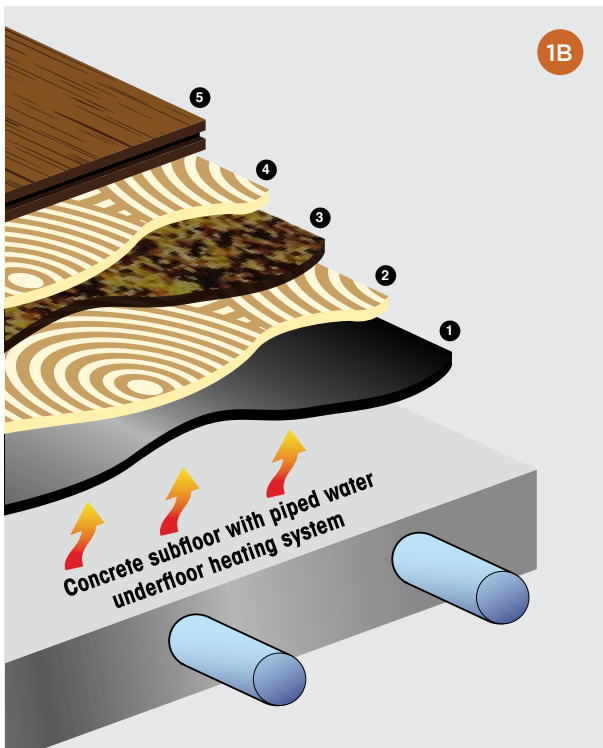

Please refer to separate data sheet for further information regarding this product and application.

3. MXA200 ADHESIVE

Repeat step 2.

4. TIMBER FLOOR

Check with your Havwoods consultant for compatibility.

1B

SOUND REDUCTION - FLOOR HEATING

FITTING A TIMBER FLOOR OVER STRATA SOUND REDUCING UNDERLAY OVER UNDERFLOOR HEATING (EXAMPLE 1B)

1. MXS140 DAMP PROOF MEMBRANE

This should be applied by either a roller or poured into ribbons along the surface and trowelled out using a 4mm trowel with a coverage of approx 12.5 - 15 sq metres / 4 litre unit.

2. MXA200 ADHESIVE

This should be trowelled out using the Marldon 3.2mm notched trowel with a coverage of approx. 1KG/sq metre.

3. STRATA UNDERLAYMENT

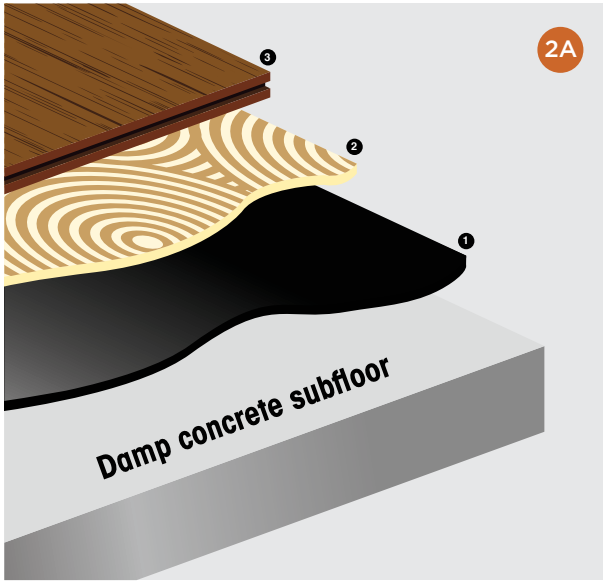

Please refer to separate data sheet for further information regarding this product and application.

4. MXA200 ADHESIVE

Repeat step 2.

5. TIMBER FLOOR

Check with your Havwoods consultant for compatibility.

DAMP SUBFLOORS

FITTING A TIMBER FLOOR OVER A DAMP CONCRETE SUBFLOOR (EXAMPLE 2A)

1. MXS140 DAMP PROOF MEMBRANE

This should be applied by either a roller or poured into ribbons along the surface and trowelled out using a 4mm trowel with a coverage of approx 12.5 - 15 sq metres / 4 litre unit.

- The MXS140 will isolate moisture up to 97% RH.
- Please contact our team for further subfloor solutions.

2. MXA200 ADHESIVE

This should be trowelled out using the Marldon 3.2mm notched trowel with a coverage of approx. 1KG/sq metre.

3. TIMBER FLOOR

Check with your Havwoods consultant for compatibility.

ANHYDRITE SCREED SUBFLOORS

FITTING A TIMBER FLOOR OVER AN ANHYDRITE SCREED WITHOUT UNDERFLOOR HEATING (EXAMPLE 2B)

1. MXS140 DAMP PROOF MEMBRANE

This should be applied by either a roller or poured into ribbons along the surface and trowelled out using a 4mm trowel with a coverage of approx 12.5 - 15 sq metres / 4 litre unit.

- The MXS140 will isolate moisture up to 97% RH.
- Please contact our team for further subfloor solutions.

2. MXA200 ADHESIVE

This should be trowelled out using the Marldon 3.2mm notched trowel with a coverage of approx. 1KG/sq metre.

3. TIMBER FLOOR

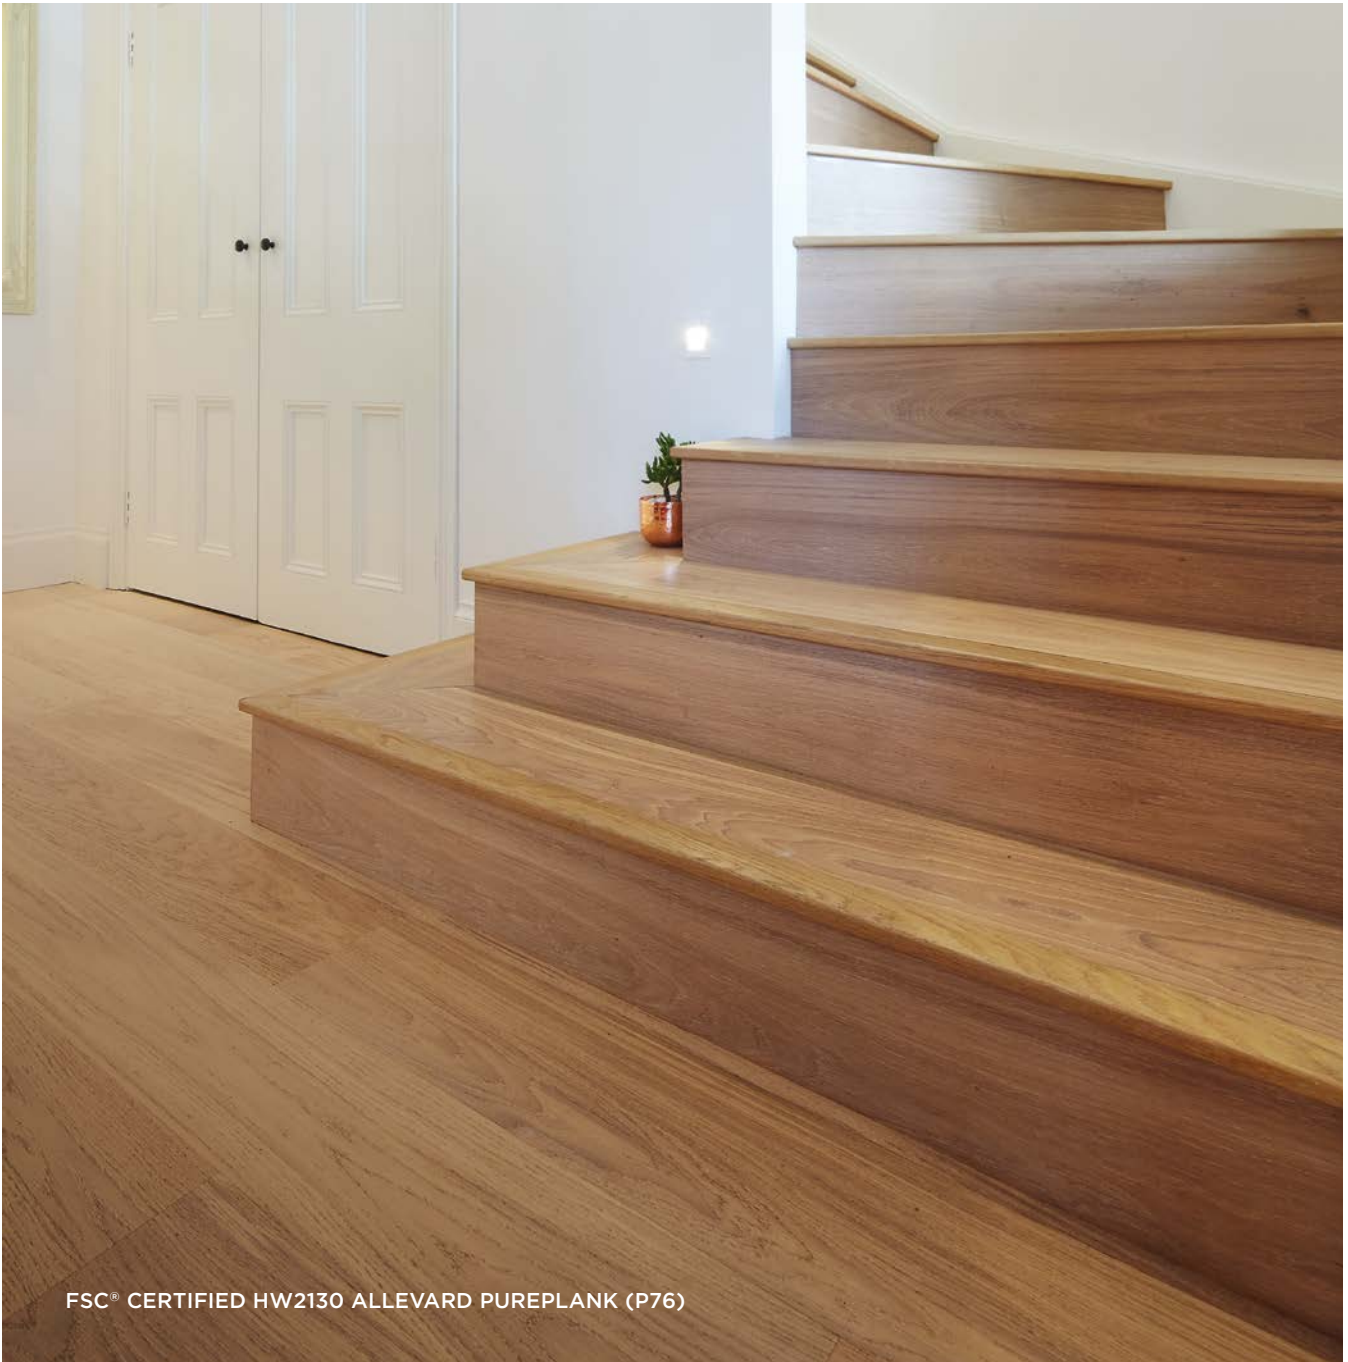

Check with your Havwoods consultant for compatibility.

Choosing incompatible products could create problems within six months of installation, which is why our solutions have been tested to give you the peace of mind you deserve.

HW963 ARENA (P86), BELLA ITALIA RESTAURANT, UK

MASTERING THE ART OF STAIRCASES

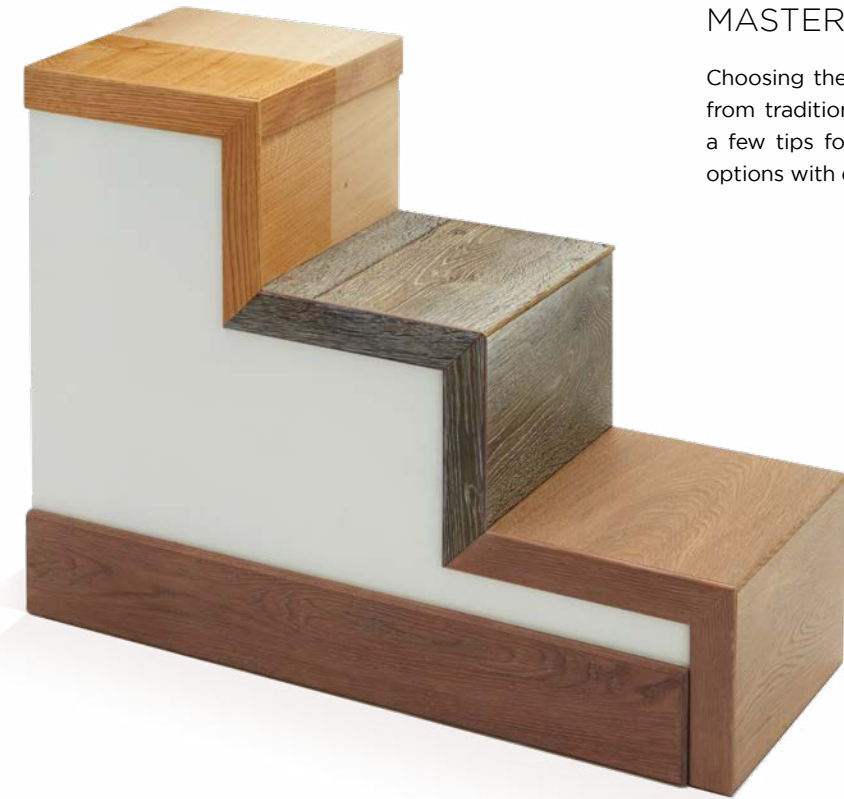

FSC® CERTIFIED HW2130 ALLEVARD PUREPLANK (P76)

MASTERING THE ART OF STAIRCASES

Choosing the right stair corner details can change the look from traditional to modern and streamlined. Here we share a few tips for the nosing detail, and explore some of your options with engineered timber.

The standard way to tackle a staircase is to use an unfinished plank matched to an off-the-shelf stair nosing and finish it on site, as shown on the top step here. Given the huge variety of stunning prefinished engineered planks available, however, it is a shame to limit your stair product selection like this. Instead, we've a suggestion as to how you can utilise any chosen plank to create a neater, sleeker and more contemporary finish, and it's very easy to replicate - simply remove the back of the board to the wear layer and lip it over the riser. Finish off with a trim to match, which can be machined to size from your chosen planks - and all using basic woodworking tools.

THE WORLD'S RESPONSIBILITY; AND OURS

Of course, you always want to deal with reputable timber companies who wouldn't dream of importing illegally logged timber. Many timber suppliers will tell you, often in good faith, that their supplies are from 'sustainable' or 'managed' sources, or from plantations. However, without an independent certification system, in practice there is often no way of verifying this, or of demonstrating to your clients that you have met their expectations.

The earth's atmosphere is not the only casualty of deforestation. 70% of the world's plants and animals live in forests and are losing their habitats to this destruction. This in turn has an adverse effect on local populations. Trees are also vital to the water cycle and in halting soil erosion.

Aiding local populations to gain socially and economically by preserving their forests instead of destroying them, is the task of international non-profit organisations like the Forest Stewardship Council® (FSC®). The FSC's mission is to promote environmentally appropriate, socially beneficial and economically viable management of the world's forests, directly or indirectly addressing issues such as illegal logging, deforestation and global warming, and with positive effects on economic development, environmental conservation, poverty alleviation and social and political empowerment.

Look for FSC® certified products throughout this Wood Book.

Other international organisations you will find referenced in this publication are the PEFC™ (Program of the endorsement of Forest Certification), who concentrate on ensuring that certification is accessible even to small and family owned forests. The Cradle to Cradle Products innovation institute (administrator for the Cradle to Cradle Certified™ Products Program) which addresses issues from a different angle, educating and empowering manufacturers to become a positive force for society and the environment.

Opting to use more wood is undeniably good for both the individual and the environment. Just make sure that the wood you use is the right wood.

PEFC/16-37-1417

The mark of responsible forestry

MAKING THE GRADE

Since there is no international standard for timber grades, at Havwoods we have established our own, shown here on oak planks. Please do remember that boards are usually selected by eye and that these parameters are simply a guideline.

GENERAL GRADING CRITERIA

PRIME

Typically, prime grade has few, if any knots, and these will be of minimal size. There will also be a minimal amount of sapwood defects and filler, if any at all. Where filler is used its colour is carefully selected to complement the wood rather than to match it exactly, and the colour of the filler may vary from batch to batch. There will be a relatively small amount of colour variation in the timber itself.

SELECT/CLASSIC

Known as either select or classic grade, typically this will have a mix of almost prime boards with other planks which have more knots. Slightly larger knots are allowed in this grade. Heartwood and colour variation in the timber should be expected and there may be some checks (cracks across the growth ring), sapwood and filler. The colour of the filler is carefully selected to complement the wood rather than to match it exactly and it may vary from batch to batch.

CHARACTER

Typically, character grade will include both heartwood and sapwood and allows a wider range of colour variation. Knots are larger and you should expect checks (cracks across the growth ring) and possibly some end shake (cracks between the rings). Filler will be used, the colour of which is carefully selected to complement the wood rather than to match it exactly, and it may vary from batch to batch.

NATURAL/RUSTIC

Known as either natural or rustic grade this allows a virtually limitless size and number of knots. Heartwood will be used, there will be colour variation, sapwood and filler; you should also expect checks (cracks across the growth ring) and possibly some end shake (cracks between the rings). The colour of the filler is carefully selected to complement the wood rather than to match it exactly and it may vary from batch to batch.

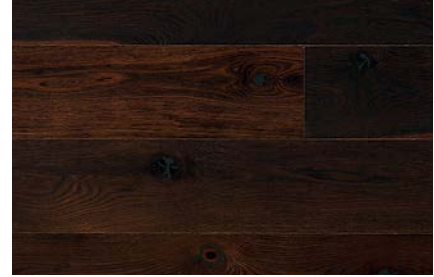

SMOKING & FIRING

SINGLE SMOKED

DOUBLE SMOKED

FIRED

Smoking and fuming are essentially the same and refer to a process whereby the lamella timber is exposed to ammonia gas for 24 (single) or 48 (double) hours. The colouration is surface deep only and, unlike staining, a smoked tone will vary from plank to plank. Fired products are treated in a vacuum, sometimes for several weeks, and the dark colour runs throughout the lamella providing a genuine visual alternative to tropical hardwoods.

SAPWOOD & TREATMENT

SMOKED & WHITE OILED

SMOKED

NATURAL OILED

Sapwood is the living part of the tree through which water and sap flow. It is always lighter in colour than the heartwood, and certain fuming, smoking and colouring processes emphasise it since it doesn't react to these treatments to the same degree. By definition sapwood contains more moisture, however this is no cause for concern since all Havwoods' timber has been carefully dried and its stability is ensured when supplied in an engineered form.

KNOTS & FILLERS

WHITE

GREY

BROWN

BLACK

A knot is either the base of a side branch or a dormant bud around which the grain flows. A knot is sometimes replaced by filler and this may be of various colours: white, grey, brown and black are shown above.

MEDULLARY RAYS, CHECKS & SHAKES

These white, ribbon-like medullary rays are an indication that the plank has been crafted from quarter-sawn timber. Checks and shakes usually occur at the end of a board and may be cut off.

EP102 OAK PRIME UNFINISHED (P50), FINISHED ON SITE WITH WATER BASED SEALANT.
YAMAHA MUSIC OFFICE, SOUTH MELBOURNE

YAMAHA

MUSIC TO MY EARS

The Yamaha Music Head Office located in South Melbourne designed by Studio Mint, has excelled itself in this tremendous fitout. Using Havwoods Professional Oak Prime Unfinished (EP102), this plank creates a fresh natural finish to complement the use of metal, concrete and other types of wood throughout the entire multi-floor office. This creates a feel of openness and sophistication to the whole project.

KENSINGTON WITH A TWIST

Peter's of Kensington new store in Barrangaroo has plenty of floor space to show off one of our Par-ky herringbone products, Ivory Oak Twist (HW7364T). The sleek patterned floor compliments the retro style of the iconic Sydney retail store, with the use of pink hues and frame like wall patterns to mesh the old with the new. The directional floor pattern invites potential customers into the store, creating an appealing entrance.

THE TITLE BOOKSTORE, BARANGAROO

“The new TITLE store is centred around activation, both of the generous space, and of the Barangaroo precinct generally. Housed in the sculptural R7 building, the 6m high volume has a sense of theatre and visual complexity, with an elevated concrete platform to the rear of the space. Our approach was to engage with the sculptural possibilities of the space while leaving room for the architecture to breathe.

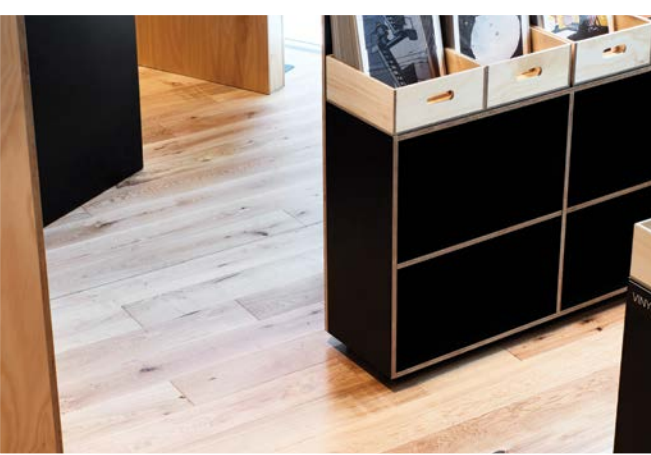

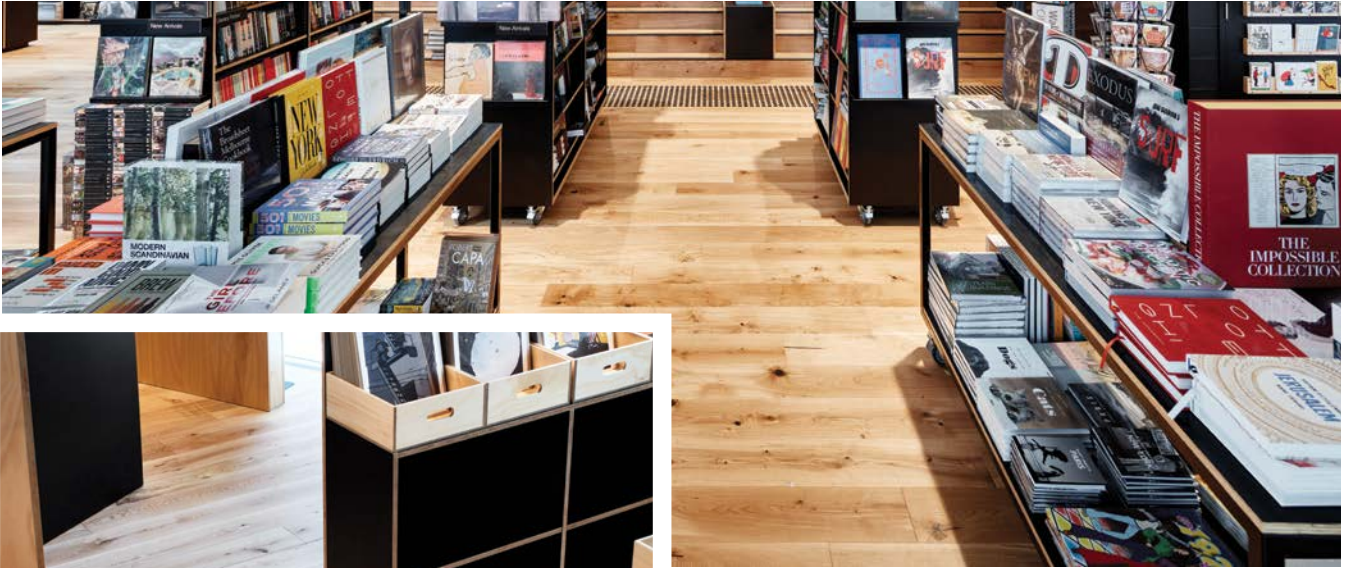

The elevated concrete platform in the space structured the scheme, with the design of a generous set of stairs stretching the full width of the platform. Creating a sense of theatre, these stairs form an informal stepped seating area for the Title events program (book launches, readings, performances) with a stage area on the lower floor. The rear of the store is lined by custom designed full height shelving,

framing a large projection screen and forming a dramatic backdrop to the space.

The display joinery is simple and industrial in language, letting the accumulation of book covers become the focus. With the exception of the full height shelving, the joinery is freestanding, and carefully separated from the architectural elements. The simplicity of the scheme and the elements within it is a deliberate response to the complexity of the facades enclosing the space.

All fitouts in Barangaroo must comply to a Sustainability Checklist established by Lendlease. The client was very keen for the store to have a timber floor, to create a sense of warmth and texture, evoking old fashioned European bookstores. We worked with Havwoods staff to select the

PUREPLANK

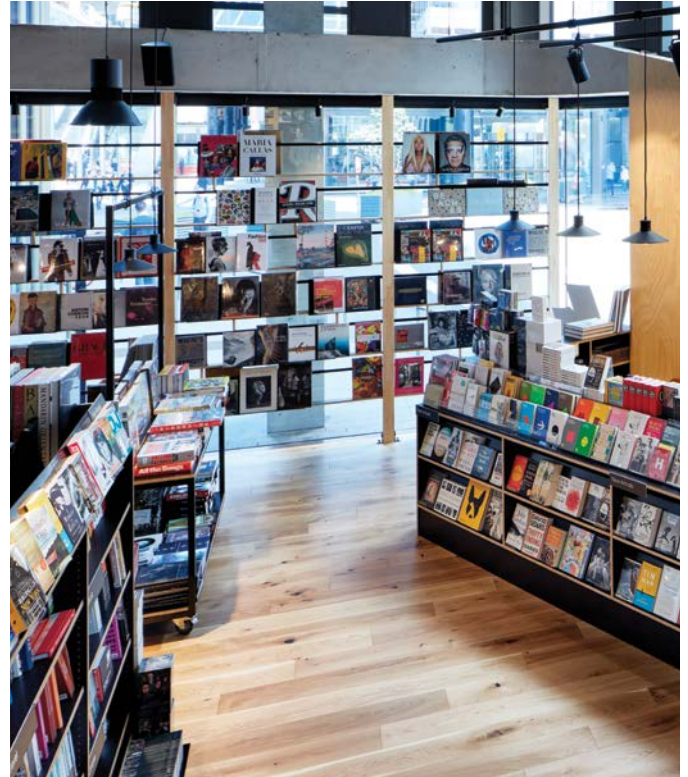

right FSC® certified engineered timber flooring, specifying Havwoods PurePlank Calvaire for its texture and rich knotty appearance, which worked as a counterpoint to the sleek black display fittings.

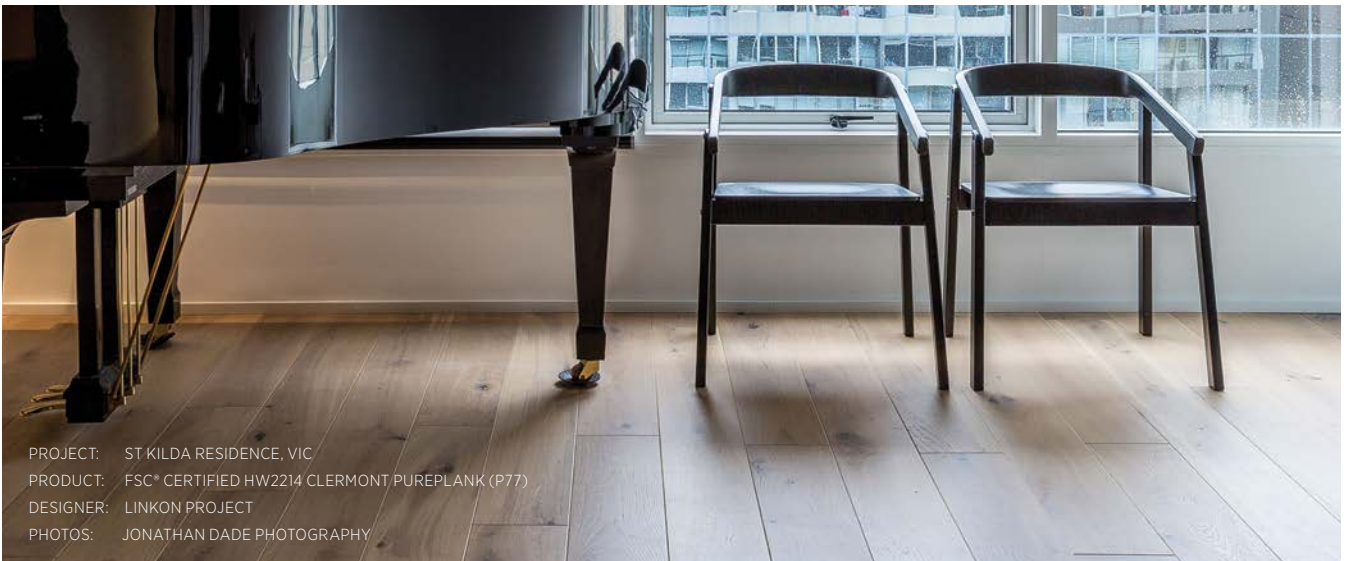

Havwoods staff advised us on the best way to detail the stair nosings and were generally very helpful throughout the process.”

DESIGNER: NANCY VUONG DESIGN AGENCY

THE ITALIAN COLLECTION

Inspired by the intricate floors of Italy, this collection of narrower, thinner planks, chevron, and herringbone blocks provide more flexibility for laying in complex patterns, or mixing with tiles and other materials.

- 20-year residential warranty
- Made in Europe
- FSC® certified
- Select grade, slow-grown European Oak lamella
- Pre-finished matt lacquered planks
- Tongue and groove profile
- Micro-bevelled and square edges
- Suitable for glue down installations
- Suitable for use over underfloor heating*

ENGINEERED CONSTRUCTION

The mark of
responsible forestry

Chevron and herringbone orders are supplied with equal quantities of left hand and right hand blocks. Straight lay plank products may contain split lengths. *Conditions apply for underfloor heating applications.

PENTHOUSE LIVING AT IT'S FINEST

“The project is both a penthouse and guest house - an adaptive project inheriting both harmonies and playfulness which are intrinsically in contradiction.

Encapsulated within heritage facades and neighbourhood apartments, any attempt to intervene with the existing interior spaces was limited. Thus the interior forms, selection of materials and lightings were essential to offer a dual role and yet in sync to achieve this goal.

Treated as a large blank canvas, the selection of a floor covering was pivotal to the project in emphasizing the distinctiveness of each space, yet coherently bringing them together - a visually static and in motion at play.”

- Lucas Lau, Principal, Lax Studios

PROJECT: PENTHOUSE, 50 BOURKE STREET MELBOURNE
PRODUCT: HW16002 OAK PALLIDO BLOCK (P99)
DESIGNER: LAX STUDIOS

“

“The selection of Havwoods’ Pallido Herringbone provided this unity, yet through its pattern and subtle shades within the timber planks, a sophistication echoing the interior and furniture was achieved.”

- Lucas Lau, Principal, Lax Studios

XTREME

Xtreme is a contemporary pre-finished traditional-looking genuine engineered timber plank that is up to 60% harder than virgin oak, making it exceptionally durable, practical, and ideal for high-traffic areas.

- 5-year commercial warranty
- 20-year residential warranty
- Exceptional durability, up to 60% harder than virgin oak
- Excellent slip ratings, achieving 'low' in both wet and dry conditions
- Select grade European Oak lamella
- Tongue and groove profile
- Micro-bevelled edges
- Suitable for glue down installations
- Suitable for use over underfloor heating*

HW0102 AGED RED BRICK (114), HCF EYECARE CENTRE, SYDNEY

TRIKBRIK

This highly realistic and lightweight interlocking cladding panel system from Europe enables you to achieve authentic-looking brick and stone walls and features quickly and cleanly, using unskilled labour and without special tools.

- Made in Europe
- Lightweight, metre square interlocking cladding panel system
- Excellent thermal, acoustic and flame retardant properties
- Water repellent and non-permeable
- Will not fade in the sun
- Mastic and touch up paint available to hide the joint lines between panels
- May be treated with anti-graffiti formula

CLEARANCE

Havwoods clearance lines enable you to use stunning products that may have previously fallen out of your budget range. All our clearance lines are genuine reductions and in perfect condition, although some may be in part or resealed packs, or not in their original packaging.

Check our website www.havwoods.com.au/clearance for the most up-to-date availability and to see new clearance lines as they become available.

NB Packs may contain split lengths.

Havwoods recommend a further coat of oil on all natural oiled products after installation.
