

CEILINGS

Logix™ Integrated Ceiling Systems from USG Boral allow you to design ceilings that meet building requirements without being constrained by the limits of traditional acoustical ceilings.

Logix transforms visual distractions such as lighting, air vents and other utilities into dramatic design elements by concentrating these fixtures on narrow 100mm, 150mm and 300mm channels. This allows for open ceilings that are uncluttered by ceiling utilities and offer a clean, monolithic, custom look with standard components.

Logix is compatible with a wide selection of 100, 150 and 300mm luminaires including Lumination™ LED Luminaires by GE Lighting Solutions. For more information visit: www.gelightingsolutions.com
