

QWICKBUILD®

MODULAR FRAMING AND SUPPORT SYSTEM
/// DECKING + TILES + TURF

QwickBuild is an external flooring system that provides strong, durable, stable structures to support decking boards, tiles, turf or a combination of these surfaces. QwickBuild is designed for installations over waterproof membranes, concrete or natural ground scenarios.

/// OUTDURE®

QWICKBUILD®

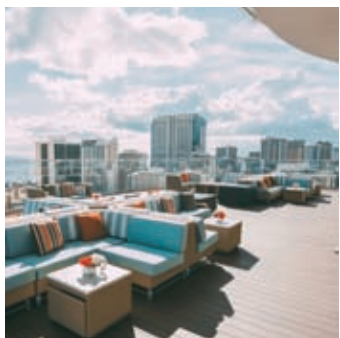

MODULAR SYSTEM FOR OUTDOOR SPACES

QwickBuild is the only system that provides a low height, level and stable solution for supporting decking, tiles, turf or a combination. Designed as a low risk, floating floor system for installations over waterproof membranes. QwickBuild is also ideal as a sub-frame over concrete, pavers or natural ground.

The complete proprietary system comprises of a comprehensive range of patented profiles and accessories for all residential and commercial scenarios. Designed for durability, the frames with a load capacity of up to 5kN point load are manufactured from structural aluminium, making them extremely light-weight. Accessories include access and ventilation grilles, adjustable height pedestals, brackets and QwickClip hidden fastenings.

The long-span frames result in fewer footings, significantly reducing installation time on site, therefore making QwickBuild a cost-effective solution. The system also enables the construction of deck structures with flush internal and external floor levels that are of complexity, including: stairs, seats, screens and curves. Particularly effective for rooftop spaces and apartment balconies due to the low height capabilities. Tiles on QwickBuild* from 70mm, capped composite decking on QwickBuild* from 71mm, hardwood decking on QwickBuild* from 67mm. * Requires nogs if insufficient height for bearer installation.

SYSTEM COMPONENTS

The QwickBuild system consists of all proprietary components designed for maximum durability.

FRAMEWORK

Comprehensive range of patented joists and bearers available in commercial and residential profiles.

Made from lightweight 6063-T6 structural aluminium with marine-grade anodized / powder coated / electrophoresis 304 stainless steel.

ACCESSORIES

Complete range including patented fasteners, brackets and screws 304 stainless steel / polypropylene

QWICKGRATES

138X23X2800MM

6063-T6 structural aluminium
Silver / Black Finish

The grilles sit level with the surface materials on top of the framework. A solution for critical ventilation and access underneath the structure.

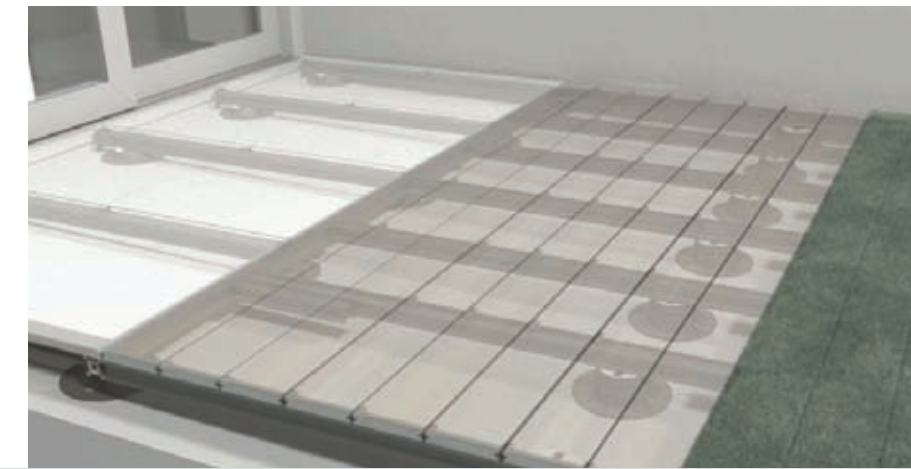

TURF BASEBOARDS

Install onto joists to structurally support synthetic turf.

6063-T6 structural aluminium
Silver / Black Finish

DECK JACKS

Range of self-leveling pedestals for low height applications.

KEY BENEFITS

- Compliant, low-risk solution: The framework is designed to 'float' on a waterproof membrane without penetrating it
- Durable and light-weight: Made from moisture-resistant materials
- Versatile: Can design with infinite configurations to accommodate various heights and engineering requirements
- Multi-surface integration: Select from Outdure's range of decking, structural exterior tiles, turf or preferred surfaces
- Low-height, long-span capabilities
- Engineered solution: Residential and commercial applications
Load capacity of up to 5kN point load and 5kPa UDL
- One complete system: For the structure, surfaces and fastenings reducing the number of trades required on a project
- Cost-effective: Fast to install with interlocking components
- Stable and level: A substantial reduction in the number of deck jack pedestals or posts required
- Access solution: Add QwickGrates as a convenient solution for critical ventilation and access to drains and services under the surface
- Enables flush levels: Between interior and exterior floor surfaces
- Easy supply/install options:
 - Loose components / Off The Shelf (OTS)
 - Kit-set / Cut To Size (CTS)
 - Made To Adjust - Prefabricated Frames (MTA)
 - Made To Measure - Pre-fabricated Modular Frames (MTM)

Outdure Products

QWICKBUILD SYSTEM

Modular structural framing system designed to support and integrate with decking / exterior tiles / turf

RESORTDECK

Premium capped composite with 4G UltraShield technology

CASADECK

Easy-care recycled composite boards for relaxed living

MINERAL TILES

Structurally engineered porcelain tiles for a minimal, modern aesthetic

STONE INSPIRE TILES

Structurally engineered porcelain tiles for a classic contemporary style

ULTRAPLUSH TURF RANGE

Durable grass alternative

DECK JACK PEDESTALS

Use with QwickBuild or as a standalone solution

QWICKCLIP RANGE

Patented hidden fasteners for deck / tile / turf installations

QWICKGRATES

Stylish solution for critical ventilation and membrane access

QWICKSCREEN

Series of vertical / horizontal designs for privacy and shade with UltraShield

QWICKMIX

Structural polymer concrete alternative

Getting Started

From calculating quantities for an instant board order, through to technical advice on complex projects, we can help with all aspects of your project. Call/email plans/photos to get started.

THE DESIGN PROCESS

We will listen to your requirements and work to your budget to maximise your outdoor living space. Extra details such as seating areas, planter boxes and screening can be added. The design will be accompanied with a price estimate and outline all the necessary materials required, including the sub-structure, grates, and accessories.

DELIVERY

Straightforward board orders can be expected as quickly as the next working day. For QwickBuild projects, once the concept design, materials, and dimensions are approved, we will be in contact to confirm delivery times and liaise with your installer. Each delivery comes with an installation and care guide to ensure your product is installed correctly for warranty.

SUPPORT

Expert installation details and advice
Online tutorials and product demo's
Fast stock availability
Complimentary design service
Specification documents
Construction drawings
Installation guides

Please note: Outdure International Ltd (Outdure) prides itself on constant product development and improvement. From time to time, Outdure's products and services will change to reflect such development. Accordingly, photographs, drawings, and product dimensions may not always be accurately represented in brochure material or on our website. In addition material, colours and textures on our brochures and website are representations only. Printing and computer screens only show an approximation. Where possible, customers should choose colours from actual samples available by request from www.outdure.com or at your local Outdure office or an authorised reseller. Colour tones, shades and surface textures may vary within a product range and or between manufacturing batches. Before purchasing any product you should check with your Outdure representative as to the current design, dimension and exact colour of any product. Outdure endeavor to supply materials as per the defined dimensions but acceptable tolerances of 1-2mm difference can occasionally happen.
