# POWER DRESSING FOR YOUR WINDOWS

## INTELLIGENT, ATTRACTIVE SUNSHADES:

Since 1990, Issey has been offering customized, versatile and aesthetic sun solutions of world-class quality to Australian property-owners, architects and building specifiers. As an authority on sunshades, Issey has dedicated years of engineering excellence and research into the Australian climate. From this, Issey develops, sells and installs premium external sunshade solutions Australia-wide. Whether protecting floorboards or furniture, extending the living space to entertain guests, or to control the climate without compromising on style, Issey can offer a suitable design that uses fittings, fabrics and frames that are in a class of their own. Each state-of-the-art sunshade crafted by Issey is intelligent, attractive, powerful, robust and shapely.

Unlike other Australian awning manufacturers, Issey can produce a headbox of up to 8 metres in one piece with no joins. Many products and parts are Issey-designed and the sunshades combine the best Australian-made content with the finest European components. A lack of effective solutions for specific sun problems has led Issey to design certain globally unique products in-house and to create original, considered solutions for large projects.

Issey's exceptional knowledge and experience extends to our sales and installation support. Our highly trained and skilled team members are qualified to recommend the most suitable product and installation that is functionally, operationally and aesthetically effective to your particular conditions.

For information on Issey Sunshades visit Issey online at [www.issey.com.au](http://www.issey.com.au) or call 1800 070 000 or meet us at our Sydney, Melbourne, Brisbane, Adelaide or Perth Showroom.

# INTELLIGENT APPLICATIONS NOW ATTRACTIVE POWERFUL AND ROBUST

## 1. EFFORTLESS OPERATION

Instant shade at a push of a button presents total ease of use for single or multiple sunshades. Switch or remote control operation and home automation compatible systems are available.

## 2. NOW YOU SEE IT, NOW YOU DON'T

Inconspicuously fitted onto the eaves, the Vertiroll disappears into the facade of this building when not in use.

## 3. STOP THE GLARE, KEEP YOUR VIEW

Not only do these Issey Issirolls stop uncomfortable glare and protect interiors from damaging UV rays, they also reduce heat transmission into the home.

## 4. SHIELDING FROM THE ELEMENTS

When fitted with a see-through fabric, the Issey Vertiroll can protect areas from damaging UV rays, heat and glare while leaving the light and view intact.

## 5. EXTEND THE LIVING SPACE

With Issey's Laguna you can effortlessly extend the living space to create an alfresco area for entertainment and relaxation.

## 6. SUBTLE AND STRIKING

Choosing from a range of fabric and framework colours enables multiple sunshades to complement each other for a subtle balance, or to create a striking feature.

## 7. WHAT'S HOT, WHAT'S NOT

The attractive and retractable Issey Vertiroll TX blends with the design of this home while being an effective method of regulating the sun's effects.

## 8. PRIVACY WITHOUT COMPROMISE

When privacy or light control is an issue, Issey's internal system offers an elegant range of internal fabric to give you various degrees of light and view.

## 9. SUMMER COOL, WINTER WARMTH

The Issey Verasun was fitted to maintain the benefits of these skylights by retracting to welcome the winter warmth and extending to block the summer heat.

## 10. ENHANCE YOUR LIFESTYLE

The Issey FTS was incorporated into the design of this home to provide the internal courtyard with sun, wind and rain protection.

# LEADING INNOVATION FROM ISSEY

Making the incredible possible, Issey's innovative sunshades are coupled with engineering excellence to create systems that are cost effective, functional and use the latest technology. Windows, roofs, balconies, terraces, stairwells and skylights can all have effective barriers to keep the sun out, using fittings, fabrics and frames that are in a class of their own.

## SHAPELY DIMENSIONS

Our sunshade systems are designed with a sleek headbox, to give protection to the fabric and mechanism when the shade is not in use. This headbox is an aluminum extrusion with a suitable thickness making it robust without compromising on its design.

## POWERED BY WORLD-LEADING MOTORS

A built-in motor fits discreetly inside the fabric roller for ease of operation. We only use Somfy, the world leader in awning motors and accessories giving us the latest in technology and excellence in worldwide support and services. These products carry the 'C-tick' logo indicating compliance with Australian

electromagnetic-compatibility standards. From standard hardwired and remote operations to compatibility with home automation systems, the latest range of wireless and remote controls offers you fingertip command of your awnings.

## INTELLIGENT OPERATION

Automatic operation is possible via sensors that monitor the environment and adjust the sunshades accordingly. When the sun comes out, so does the awning. When constant high wind threatens, the awning automatically retracts, protected from the damaging effects of stormy weather, even when you're not at home. What's more, at sunset, the awning automatically recedes into its casing allowing you to enjoy the stars.

## DOING IT BY HAND

Alternatively, the latest 'eye and ball' smart crank mechanism can be used; which reduces noise, wear and friction, making handling effortless.

## ROBUST FABRICS

Issey sunshades are available in advanced see-through fabrics or effective acrylics which have tensile strength and are resistant to mould, dirt, water, UV, heat and glare. Whatever your style or taste, you'll find a fabric type and colour that's right for you. Choose from a whole range of decorator solid and striped patterns.

## VIEW-ENHANCING

Advancements in screen weaving mean that see-through screen fabric has become exceptionally suitable material for year-round outdoor blinds. Issey only uses the highest quality screens such as Ferarri Soltis or Dickson Sunworker; which are hard-wearing, easy to clean and maintain, and have unsurpassed tensile strength. These great multi-purpose fabrics are welded rather than stitched to prolong their life. It stops the glare, while maintaining visibility.

## CLIMATE CONTROL

The thermal characteristics of the Soltis Screen 86 and 92, or Sunworker 90, make them appropriate for outdoor use. The material filters the light while expelling the hot air by convection through the weave. These exceptional heat control properties lead to a remarkable reduction in air-conditioning running costs.

## AESTHETIC PRIVACY PROTECTION

For extra privacy, Issey uses opaque Diklon 32 acrylic fabric which is water repellent. With a range of attractive patterns and colours, each acrylic sunshade can be made to blend into the background, or become a striking feature in itself. It is also an incredibly effective sunblock, as it deters 99.5% of the sun's rays, and filters the light. Acrylic fabric is tough and dirt-resistant. It doesn't rot, is easy to clean and is not affected by mildew, water and weathering. With minimal maintenance and care the sunshade will be kept looking good.

## THE FINEST COMPONENTS

Issey frames are made of aluminium parts, and can be anodized, or powder-coated, to coordinate with their surroundings, and to protect against corrosion. All our sun shade systems are assembled with stainless steel bolts, screws and nuts, which mean low maintenance, effective operation and good looks.

## SOMETHING FOR EVERYONE

Every sunshade is custom-made to size. With a wide range of sunshade systems over a variety of applications, skilled Issey-trained team members can advise and recommend the appropriate system for effective, easy and considerate solutions, whatever your style or taste.

## 1. SPECIALIST IN OPEN ASPECTS

The Unicom gives comfortable shading to potentially problematic river and coastal properties, but still allows idyllic views. The system is fitted with quality components that can easily withstand the salt of the ocean, and is resistant to strong wind.

## 2. MULTIPLE SYSTEMS

The Verasun, Issiroll and Rollerfall systems can be coupled together to shade windows up to 8m wide. Two screens can be driven by one motor to give extra flexibility.

## 3. IMPRESSIVE SKYLIGHT SHADES

Enjoy the dramatic effect of a dome skylight without the glare of the sun. It's made possible by the Fabric Tension Systems Barrelvault Awning. A skylight allows you to make the most of the winter sun, and admire the night sky, while enabling you to block the heat and glare of summer.

## 4. THE TOTAL LOOK

With the unifying look of our sunshade systems, you can choose different applications, yet maintain visual consistency and maximum sun protection. Sunshades are available in attractive fabric and casing colours that allow them to blend into the background, or make them a striking feature. This beautiful home features a Laguna terrace awning and Issiroll screen combination.

## 5. SPAN CAPABILITY

The Unicom can easily span six metres, giving valuable sun protection along the entire one-piece glass wall. When installed with a see-through screen, the view is maintained.

## 6. FUNCTIONALITY

Enhance the operational space of patios, terraces, verandahs and balconies. Without interfering poles or structures, the Laguna and Vertiroll awnings offer control of solar heat, glare and rain that is effective, powerful and robust.

## 7. ATTRACTIVE & POWERFUL

There are 9 Issey Vertiroll Sunscreens incorporated beautifully into this outdoor living area. Issey thrives on providing an elegant design whether you want an inconspicuous sunshade, or one that is a striking feature in itself. Using the finest components and fittings, Issey ensures results in a class of its own.

# ISSEY SUN SHADE SYSTEMS GUARANTEE

**The Issey guarantee** | Our policy is to provide the most appropriate sunshade system that will last, enhance the appearance and value of the property, be easy to use, protect the interior from fading and provide comfort from heat and glare. We design certain globally unique products in-house, and guarantee the use of only the finest European components and the best Australian-made content with our own Issey-designed parts.

**Advice and Service** | Finding solutions to specific sun protection problems is our speciality. One of our strengths is understanding the best components and materials available to maximize the efficiency of your system through effective design. We discuss your ideas, and use our wealth of knowledge and experience to provide the product and installation most functionally, operationally and aesthetically effective to your particular conditions. At Issey we only allow qualified and highly trained team members to undertake any installations or to give sales advice.

**Our invitation to you** | Visit Issey online or come to our showroom and try the different systems; watch how smoothly they operate, look at the range of colours, and feel the quality of our fabrics and components. Bring in your plans – over a cup of coffee we can assist in selecting the best options tailored to your situation.

COMBINING  
TIMELESS  
BEAUTY AND  
INGENUITY

# OUR RANGE OF EFF

## 05 ISSEY VERTIROLL

is a tensioned vertical screen for use on verandas, pergolas, patios and other semi-open spaces. The screen acts as a windbreak, rain barrier, and blocks the sun while maintaining the view. Its see-through fabric allows natural light to penetrate, enabling enjoyment of the landscape and freedom from blowing wind and harsh glare. Free from complicated cords and pullies, it can be fitted with stainless steel cables for minimal effect on its surroundings, and can span areas of up to 6m wide with a drop of 3m. The FLEXIROLL is a variation of the Vertiroll, and is the ideal straight drop awning for shopfronts with its weighted vertical screen. Its clean, contemporary finish is perfect for outdoor signage, and it blocks even low sun.

## 05 ISSEY FLYLOC

gives you the freedom to enjoy your outdoor patio or pergola by providing the most effective sun, heat, glare, wind, rain and insect protection on the market. This multifunctional vertical shade shields open areas from the elements and buzzing insects, but won't obstruct your view. The revolutionary FLYLOC's fabric is secured tautly in its tracks to keep out nagging flies and mosquitoes. The motorisation of the system allows ease of operation, extending and retracting at the push of a button, unlike fixed screens that are a hassle to remove and install. The maximum width is 5m with a drop of 3m.

## 04 ISSEY FABRIC TENSION SYSTEM (FTS)

is designed specifically for skylights or to shade and protect large areas that require year-round protection. Previous shading methods have often been unsightly or cumbersome, detracting from the existing design. The FTS provides excellent sun and heat control at the touch of a button and is able to resist reasonably strong winds. Issey's extensive knowledge converts this concept to skylights or structures of almost any shape and size. The maximum width is 4.5m with a drop of 8m.

## 03 ISSEY UNICOM

is the ideal choice when a subtle and yet striking awning is desired for east and west facing spaces. Mounted to window or balcony structures, it is designed to resist strong winds, and is ideal for upper floors. When fitted with a see-through fabric, you can still make the most of the views. It has a maximum width of 6m with a 2.3m drop of fabric, and features manual or motorised options for operation.

## 02 ISSEY LAGUNA

is a retractable folding-arm awning that extends and optimises living areas for entertainment and relaxation. The ultimate in overhead protection, this motorised retractable system guards against the sun's heat, glare and harmful UV radiation, providing coverage for an al fresco lifestyle and protecting interiors vulnerable to fading near windows or doors. Available in widths up to 16m with extensions up to 4m, the Laguna is suitable for both commercial and residential applications. The DAKOTA boasts the same effective sun control, but is used ideally for smaller sized patios, decks, courtyards, or areas that experience low clearances. Its unobtrusive design brings a contemporary style to outdoor enjoyment, whilst blending seamlessly with the architectural surroundings.

# EFFECTIVE SOLUTIONS

## 07 ISSEY MARKISOLETTE

A variation on the Unicom is the MARKISOLETTE, which is suitable for long sections of glass panels or facade. This motorised awning is popular for both its aesthetic and protective features, which complement any architectural style. The maximum size is 3.6m with a drop of 3.8m.

## 09 ISSEY ROLLERFALL

The motor-operated ROLLERFALL is designed for sunrooms that are too hot to use in summer yet love the warmth in winter. It is mounted to the outside of the window frame, and needs a minimum slope of 30 degrees. Used with a see-through fabric, the view is maintained, and protection is given from the sun's harsh heat and glare. The maximum width is 4m with a drop of 6m.

## 10 ISSEY ODYSSEY

boasts the most innovative awning technology in the world, with its extreme wind resistance and gas operated compression spring system that ensures its fabric is taut, and the motorised operation is smooth and reliable. The ODYSSEY is a retractable roof for conservatories, pergolas, courtyards, glass roofs, open roofs or custom-built structures, and is ideal for large span areas or locations that experience higher wind levels where a folding arm awning wouldn't suffice. The Odyssey is robust, quality shading at its finest and is available in widths up to 16m and extensions up to 5m.

## 11 ISSEY VERASUN

is a motorised retractable roof for conservatories, pergolas, courtyards, or custom-built structures. This tensioned system has fixed tracks which follow the framework of the existing structure, offering effective sun protection and control, even in locations which experience higher wind levels. The VERASUN is extremely versatile, able to cover and accommodate for various deflections of the structure or to provide additional shade to front elevations. Incorporated with a minimum 20 degree slope, it can also be used as a rain shelter. The MICROSUN is a similar shade, used ideally on smaller skylight applications, where it provides 99.5% UV protection, shielding interiors from heat, glare and harsh sunlight that fade furniture and floors.

## 01 THE ISSIROLL

is the ultimate in outdoor window blinds. Sitting external to vertical glass, it stops heat and glare from entering, creating a comfortable internal environment in your home, whilst allowing for the enjoyment of the view. This retractable sunscreen is available in widths up to 4.4m with extensions up to 3.4m and is unobtrusively designed, equipped with a slimline headbox which protects and prolongs the life of the system. The WINDLOC provides the same effective protection for windows but has greater tensioning to minimise flapping and stop rattling in windy areas. The BLACKOUT is also a variation of the Issiroll, but is used internally and fitted with a blackout fabric which is impervious to light, turning day into night at the push of a button. This motorised shade is used wherever complete darkness is needed; ideal for home theatres and bedrooms.
